1. CONTRAST OF MISCELLANEOUS PARTS

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.

● The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

● Screws adjacent to ∇ mark on product are used for disassembly.

● For the applying amount of lubricants or glue, follow the instructions in this manual.

(In the case of no amount instructions, apply as you think it appropriate.)

● Nos. indicate the pages and Nos. in the service manual for the base model.

● When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560 Ω \rightarrow 56 x 10¹ \rightarrow 561 RD1/4PU $\begin{matrix} 5 & 6 & 1 \\ \hline \end{matrix}$ J

47k Ω \rightarrow 47 x 10³ \rightarrow 473 RD1/4PU $\begin{matrix} 4 & 7 & 3 \\ \hline \end{matrix}$ J

0.5 Ω \rightarrow R50 RN2HR $\begin{matrix} 5 & 0 \\ \hline \end{matrix}$ K

1 Ω \rightarrow 1R0 RS1P $\begin{matrix} 1 & R & 0 \\ \hline \end{matrix}$ K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω \rightarrow 562 x 10¹ \rightarrow 5621 RN1/4PC $\begin{matrix} 5 & 6 & 2 & 1 \\ \hline \end{matrix}$ F

4. DIAGNOSIS

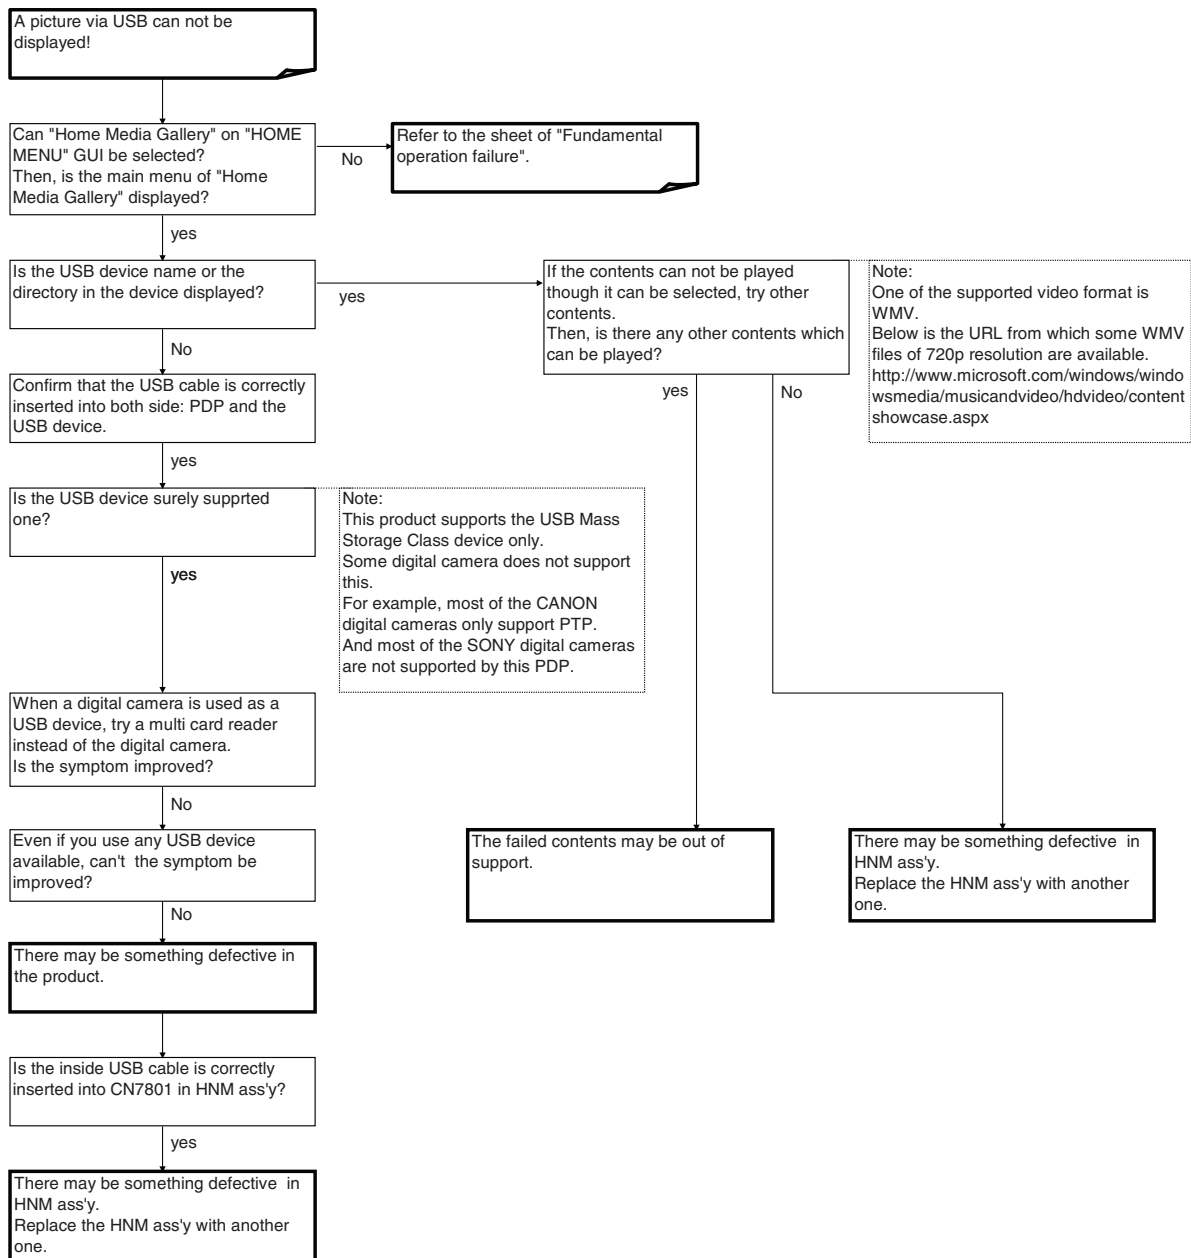

4.1 DIAGNOSIS FLOWCHART

4.1.1 HN MODULE ASSY

< Network operation failure >

< USB operation failure >

< Fundamental operation failure >

"Home Media Gallery" does not work at all!

Doesn't "Home Media Gallery" on "HOME MENU" become selectable after power-on?

Note:
It takes a short while to start "Home Media Gallery" function.
Please wait for about 40 seconds until "Home Media Gallery" turns selectable.

No

There may be something defective in the product.

Check each wire connection with the MAIN ass'y.
[HN1]CN7851<=>[M35]CN4002
[HN2]CN7901<=>[M31]CN4111
Isn't there any failure?

No

Check the power supply for HNM ass'y.
Is there +5V voltage on 1st and 2nd pin in CN7901 of HNM side and on 1st and 2nd pin in CN4111 of MAIN side?

yes

Check the UART communication between HNM ass'y and MAIN ass'y.
Almost 35 seconds after power-on, is any pulse signal observed on 2nd pin in CN7851: RXD_HNM?

Note:
After completing the self-initializing, HNM ass'y notice it to MAIN ass'y by using RXD_HNM.

No

To make analysis, remove the wire ass'y between CN7901 and CN4111. Then, check the voltage in MAIN side again.
Is +5V still not there?

yes

No

There may be something defective in MAIN ass'y.

There may be something defective in HNM ass'y.
Replace the HNM ass'y with another one.

There may be something defective in MAIN ass'y.
Check the UART path in MAIN ass'y.

Check the switching regulator circuit in MAIN ass'y for HNM power supply.
That is IC4309, Q4304 and the parts around it.

5. SERVICE MODE

5.1 DETAILS OF FACTORY MENU

5.1.1 HMG SERVICE MODE

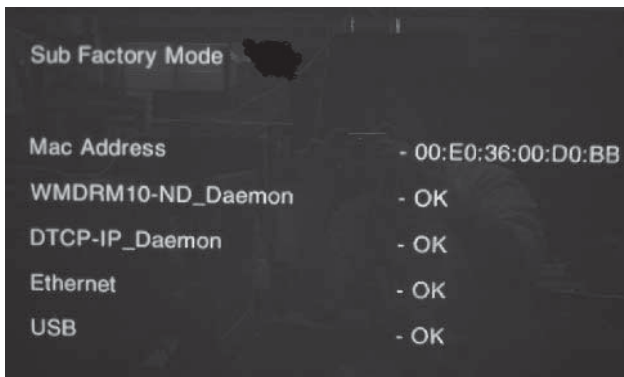

1. Enter SERVICE FACTORY MODE and change to HMG/HG SERVICE MODE.

Refer to the service manual for Regular models (PDP-6010FD/KUCXC) about the changes method of MODE, and the operating procedure of keys.

2. If it changes to HMG/HG SERVICE MODE, the following screen will be displayed.

If this screen is displayed,
[ENTER] key is kept on pressing for 5 second when the status of this menu is <YES>,
Then HMG SERVICE mode will be started.
Then the following screen is displayed.

The details of each parameter displayed on the screen are as follows.

Mac Address	**.***.***.***.***	
WMDRM10-ND_Daemon	OK/NG	State of "WMDRM10-ND_Daemon"
DTCP-IP_Daemon	OK/NG	State of "DTCP-IP_Daemon"
Ethernet	OK/NG	State of "Ethernet" (Hardware connection state)
USB	OK/NG	State of "USB" (Hardware connection state)

2. End method
It is the same as the case that Home Media Gallery displays.

6. DISASSEMBLY

6.1 DISASSEMBLY AND REASSEMBLY PRECAUTIONS FOR SPEAKER SYSTEM

(1) The Grille Assy

The Grille Assy is secured to the baffle plate with two-sided tape and bosses. When removing the Grille Assy, if is necessary to wear cotton gloves.

Disassembly

1. Insert the tip of your gloved finger into the gap between the Grille Assy in front and the corner of the baffle plate so that the Grille Assy is slightly lifted.

2. Insert the gloved finger to the extent of the second joint into the gap between the cabinet and the Grille Assy.

SERVICE PRECAUTIONS

Be careful in handling this product, because scratches on cabinet coating are easily noticeable. When working on this unit, be sure to place the cabinet on a piece of soft cloth for protection.

3. Alternately and gradually lift the left and right sides of the Grille Assy by about 5 cm, sliding gloved fingers along the cabinet. When lifting the Grille Assy, be sure to lift the left and right sides alternately, but not both sides simultaneously.

Note : Be careful not to bend the Grille Assy too far. Otherwise, it may be damaged.
OK : Good example **NG :** Bad example

OK

NG

Reassembly

Remove the old two-sided tape attached to the rear side of the Grille Assy and the front side of the Baffle, and adhere new two-sided tape. Press the bosses into the baffle plate and press the entire grille into position. (Press the bosses from the woofer frame.)

(2) Woofer (Disassembly)

The woofer is secured to the baffle plate with four screws from the outside. To remove the woofer, first remove the baffle plate. (Remove the baffle plate first, because the cables from the Network Assy are short.)

Remove the two packings from the side of the woofer frame.

Reassembly

When reassembling the woofer, place it so that its connector plate is facing downward. Tighten the screws to the baffle, then attach the two packings to the side of the woofer frame.

(3) Tweeter (Disassembly)

The tweeter is secured to the baffle plate with three screws from the outside. To remove the tweeter, first remove the baffle plate. (Remove the baffle plate first, because the cables from the Network Assy are short.)

Reassembly

When reassembling the tweeter, place it so that its connector and screw-hole positions align with those on the baffle plate.

Network Assy (Caution)

When removing the Network Assy, pull it out a little at a time from alternate sides, because it is seated tightly.

Baffle Assy (Caution)

When reassembling the cabinet and the baffle plate, secure the screws in the order shown in the figure below:

Service Manual

PDP-6010FD

ORDER NO.
ARP3453

PLASMA DISPLAY SYSTEM

PDP-6010FD

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
PDP-6010FD	KUCXC	AC 120 V	

For details, refer to "Important Check Points for good servicing".

SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.
6. Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
7. Perform the following precautions for the PDP panel.
 - When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 - Make sure that the panel vent does not break. (Check that the cover is attached.)
 - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
8. Pay attention to the following.
 - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of 4 MΩ.

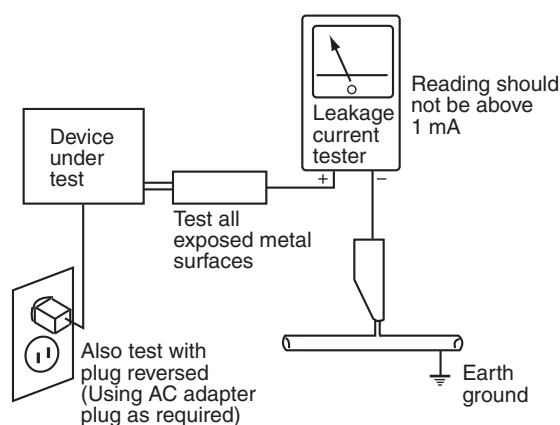

The below 4 MΩ resistor value indicate an abnormality which require corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 1 mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification (addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

1. SERVICE PRECAUTIONS

1.1 NOTES ON SOLDERING

- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit.
Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.
- Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40 °C.
Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 °C in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:

- Parts numbers of lead-free solder:
GYP1006 1.0 in dia.
GYP1007 0.6 in dia.
GYP1008 0.3 in dia.

1.2 CHARGED SECTION AND HIGH VOLTAGE GENERATING POINT

■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

■ High Voltage Generating Point

The places where voltage is 100 V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

The VSUS voltage remains for several minutes after the power to the unit is turned off. These places must not be touched until about 10 minutes after the power is turned off, or it is confirmed with a tester that there is no residual VSUS voltage.

If the procedures described in “5.6.1 PANEL DRIVE-POWER ON/OFF FUNCTION” are performed before the power is turned off, the voltage will be discharged in about 30 seconds.

POWER SUPPLY UNIT	(210 V)
60F X DRIVE Assy	(210 V)
60F Y DRIVE Assy	(-270 V to 400 V)
60F SCAN A Assy	(-270 V to 400 V)
60F SCAN B Assy	(-270 V to 400 V)
60F SCAN C Assy	(-270 V to 400 V)
60F SCAN D Assy	(-270 V to 400 V)

- : Part is Charged Section.
 ■ : Part is the High Voltage Generating Points other than the Charged Section.

Remote Control Unit

This section describes the functions of the buttons available when the mode switch has been set to TV.

Mode switch
(with "TV" selected)

- 1 **TV** : Turns on the power to the plasma display or places it into standby mode.
- 2 **Transmission confirmation LED**
- 3 **INPUT**: Selects an input source of the plasma display. ("INPUT1", "INPUT 2", "INPUT3", "INPUT4", "INPUT5", "INPUT6" and "INPUT 7")
- 4 **SCREEN SIZE**: Selects the screen size.
- 5 **AV SELECTION**: Selects audio and video settings. (AV source: OPTIMUM, STANDARD, DYNAMIC, MOVIE, GAME, USER. PC source: STANDARD, USER.)
- 6 **INFO**: Displays a channel banner when a TV program is being watched.
When the TV Guide On Screen™ system is in operation, displays information about the currently highlighted channel (if available).
- 7 **HOME MENU**: Displays the HOME MENU screen.
MENU: Displays a panel menu when the TV Guide On Screen™ system is in operation.
- 8 **DAY +/-**: Jumps to the next or previous day of program listings in the TV Guide On Screen™ Listing service.
- 9 **↑/↓/←/→**: Selects a desired item on the menu screen.
- 10 **HDMI CONTROL**: Displays the HDMI Control menu.
- 11 **FAVORITE CH (A, B, C, D)**:
Selects any of the four preset channels.
While watching, you can toggle the set channels by pressing A, B, C and D.
- 12 **0 to 9**: Selects the channel.
- 13 **• (dot)**: Enters a dot.
- 14 **CH +/-**: Selects the channel.
- 15 **SPLIT**: Switches the screen mode among 2-screen, picture-in-picture, and single-screen.
- 16 **FREEZE**: Freezes a frame from a moving image. Press again to cancel the function.
- 17 **MTS**: Selects MTS/SAP or language depending on the program being watched.
- 18 **ANT**: Selects the antenna (A, B).
- 19 **PC**: Selects the PC terminal as an input source.
- 20 **DISPLAY**: Displays the channel information.
- 21 **TV GUIDE**: Displays the TV Guide On Screen™ system.
- 22 **ENTER**: Executes a command.
- 23 **PAGE +/-** (for the TV Guide On Screen™ system): Scrolls the program listing screen vertically.
- 24 **RETURN**: Returns to the previous menu screen.
- 25 **CH ENTER**: Executes a channel number.
- 26 **CH RETURN**: Returns to the previous channel. This button is disabled while the TV Guide On Screen™ system is displayed.
- 27 **VOL +/-**: Sets the volume.
- 28 **MUTING**: Mutes the sound.
- 29 **SHIFT**: Moves the location of the small screen when in the picture-in-picture mode.
- 30 **SWAP**: Switches between the two screens when in the 2-screen or picture-in-picture mode.

Luminous remote control buttons

All buttons on the remote control unit are luminous and gather and store light. This enables quick access to the desired function when performing operations in dark places.

Note

- When using the remote control unit, point it at the plasma display.

3. BASIC ITEMS FOR SERVICE

3.1 CHECK POINTS AFTER SERVICING

Items to be checked after repair (PDP)

To ensure the quality of the product after repair, check the recommended items shown below:

No.	Procedures	Item to be checked
1	Check if all the symptoms pointed out by the customer have been addressed.	The symptoms in question must not be reproduced.
2	Connect the peripheral equipment.	Connect all external peripheral equipment as originally connected and check if the connections are correct.
3	Check the video and audio.	Tune in to the stations that the customer would normally receive and check if video and audio are normal.
4	Check the buttons and controls.	Use the buttons and controls on the remote control unit and main unit and check if they operate properly.
5	Check the cabinet.	Check for any scratches or dirt that have been made or attached on the cabinet after receiving the product for repair.

See the table below for the items to be checked regarding video and audio:

Item to be checked regarding video	Item to be checked regarding audio
Block noise	Distortion
Horizontal noise	Noise
Dot noise	Volume too low
Disturbed image (video jumpiness)	Volume too high
Too dark	Volume fluctuating
Too bright	Sound interrupted
Mottled color	

3.2 QUICK REFERENCE

Quick Reference upon Service Visit ①
Notes, PD/SD diagnosis, and methods for various settings

Notes when visiting for service

1. Notes when disassembling/reassembling

- ① **Rear case**
When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "7. DISASSEMBLY".
- ② **Attaching screws for the HDMI connector**
When attaching the HDMI connector after replacing the Main Assy, secure the HDMI connector manually with a screwdriver, but not with an electric screwdriver. If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

2. On parts replacement

- ① **How to discharge before replacing the Assys**
A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:
A: Let the panel sit at least for 3 minutes after the power is turned off.
B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.
For details, see "5.6.1 PANEL DRIVE-POWER ON/OFF FUNCTION".
- ② **On the settings after replacement of the Assys**
Some boards need settings made after replacement of the Assys. For details, see "8. EACH SETTING AND ADJUSTMENT".

3. On various settings

- ① **Setting in Factory mode**
After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

PD/SD

How to locate several items on the Factory menu

- { } : Item on the Factory menu
- [] : Key on the remote control unit
- " " : Screen indication

1. Confirmation of accumulated power-on time and power-on count

Select {INFORMATION} then {HOUR METER}.
(After entering Factory mode, press [↓] five times.)

2. Confirmation of the Power-down and Shutdown histories

- ① **Panel system**
PD: Select {PANEL FACTORY} then {POWER DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] three times.)
SD: Select {PANEL FACTORY} then {SHUT DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] four times.)
- ② **MTB section**
Select {INFORMATION} then {MAIN NG}.
(After entering Factory mode, press [↓] three times.)

3. How to display the Mask indication

- ① **Mask indication in the panel side**
1. Select {PANEL FACTORY} then {RASTER MASK SETUP}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] 8 times.)
2. Press [ENTER/SET], then select a Mask indication, using [↑] or [↓].

Adjustments and Settings after replacement of the Assys (Procedures in Factory mode)

1. Digital Video Assy: Transfer of backup data

- ① Select {PANEL FACTORY}, {ETC}, then {BACKUP DATA}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [↓] seven times, then press [ENTER/SET].)
- ② Select {TRANSFER}, using [→], then hold [ENTER/SET] pressed for at least 5 seconds.
- ③ After transfer of backup data is completed, {ETC} is automatically selected, and the LED on the front panel returns to normal lighting.

2. MAIN Assy: Execution of FINAL SETUP.

- ① Select {INITIALIZE} then {FINAL SETUP}, then press [ENTER/SET]. (After entering Factory mode, press [MUTING] three times, then press [↓] four times.)
- ② Select "YES", using [→]. Then hold [ENTER/SET] pressed for at least 5 seconds.
- ③ After "FINAL SETUP IS COMPLETE" is displayed on the screen, turn the POWER switch of the main unit off.

3. POWER SUPPLY Unit: Clearance of the accumulated power-on count and maximum temperature value

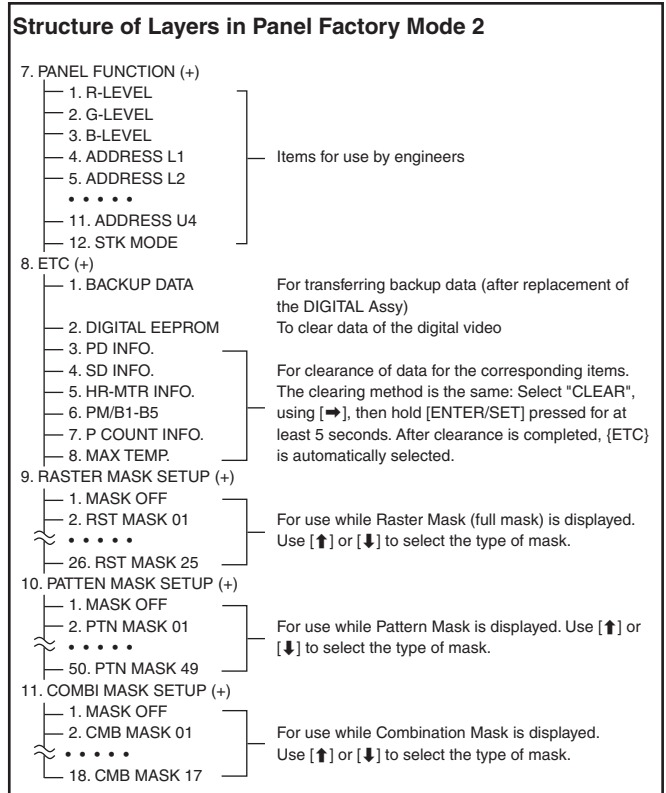

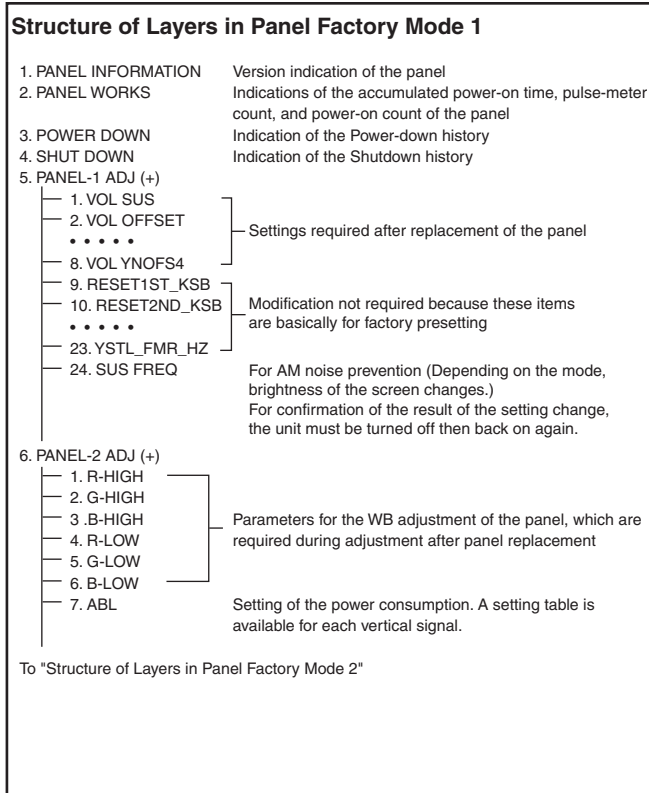

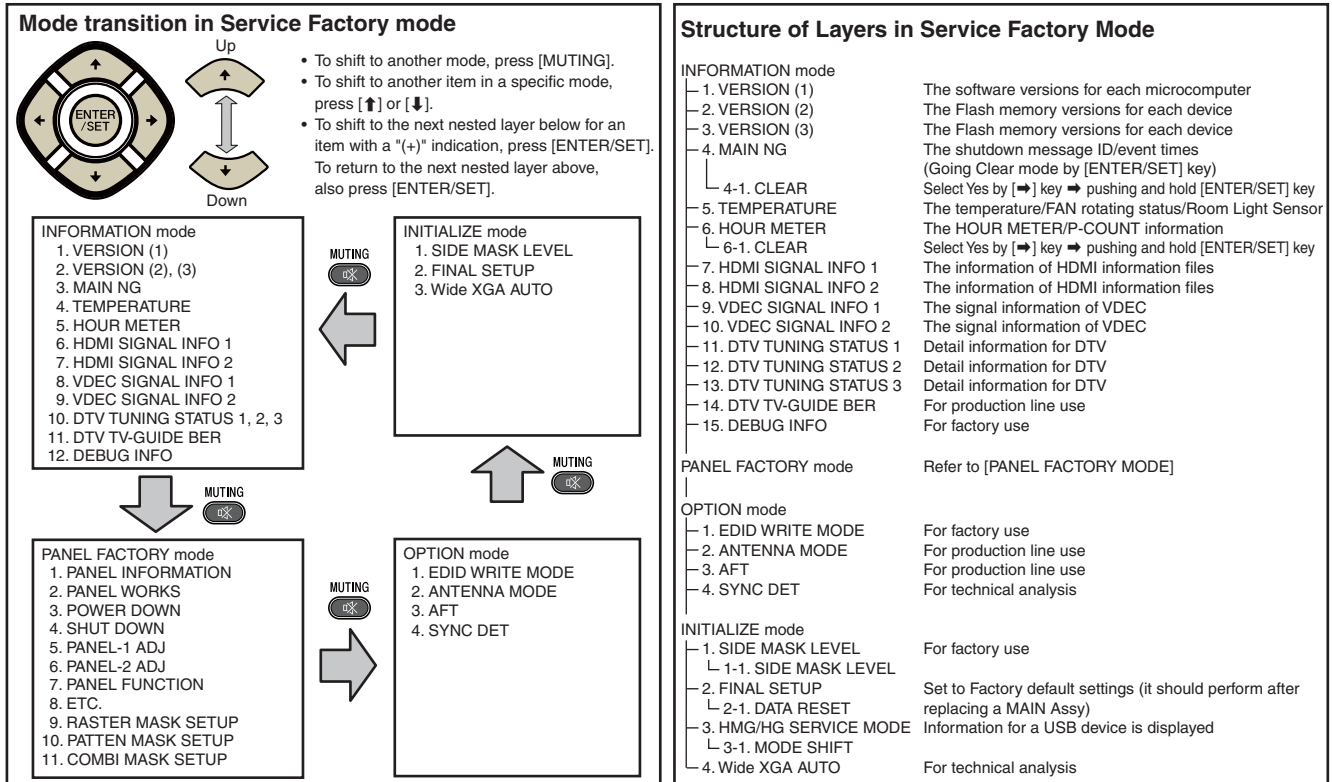

- ① Select {PANEL FACTORY}, {ETC}, then {P COUNT INFO}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [↓] seven times, press [ENTER/SET], then press [↓] six times.)
- ② Press [→] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.

4. Other Assys: Clearance of the maximum temperature value

- ① Select {PANEL FACTORY}, {ETC}, then {MAX TEMP}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER/SET], then press [↓] seven times.)
- ② Press [→] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected.

5.1.2 POWER ON SEQUENCE

- ① : The remote control (or KEY) signal is input to the IF microcomputer.
- ② : The IF microcomputer sends the operation data of the remote control unit (or KEY) to the main microcomputer.
- ③ : The main microcomputer issues a startup command (PON) to the MOD microcomputer.
- ④ : The relay is controlled with logical OR interpretation of control signals by the main microcomputer and module (MOD) microcomputer.

5.4 DIAGNOSIS OF SD (SHUTDOWN)

5.4.1 BLOCK DIAGRAM OF THE SHUTDOWN SIGNAL

■ Block Diagram of the Shutdown Signal

5.4.2 SD (SHUTDOWN) DIAGNOSIS

Frequency of LED Flashing	Major Type	Detailed Type	Log Indication in Factory Mode		Checkpoint	Possible Defective Part	Remarks
			MAIN	SUB			
Blue 1	Abnormality in the Sequence LSI	Communication error		RTRY	CLK_SQ/TXD_SQ, etc.	IC3301, IC3601	SQ_IC communication not established. IC3301 may not have properly started up.
		Drive stop		SONO	Check if the video sync signal is input to IC3301.	CN3201, IC3202, IC3301	A shutdown occurs if IC3301 has not properly started up (a communication failure between IC3301 and IC3302 [FASH]).
		Busy		BUSY	BUSY_SQ	IC3301, IC3601	If BUSY_SQ remains high, a shutdown is generated.
		Incoherent version (hardware, software)		VER-HS	Check the model number of the DIGITAL Assy and the destination of the sequence LSI.	IC3302, IC3601	The written SEQ_PROG is incoherent with data on the DIGITAL Assy.
Blue 2	Failure in IIC communication with the module microcomputer	Incoherent version (memory, software)		VER-MS	Check the model number of the DIGITAL Assy and the destination of the sequence LSI.	IC3302, IC3601, IC3602	A shutdown occurs if the SEQ_PROG that has been stored in backup memory does not coincide with the actual SEQ_PROG.
		DIGITAL Assy EEPROM		EEPROM	IIC communication line of IC3602	IC3602, IC3601	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
		PANEL SENSOR Assy EEPROM		BACKUP	IIC communication line of IC3902	PANEL SENSOR Assy (IC3902), IC3901	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
		DAC1		DAC1	IIC communication line of IC3605	IC3605, IC3601	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
Blue 3	Abnormality in RST2 power decrease			DAC2	IIC communication line of IC3606	IC3606, IC3601	Check the pull-up resistor of the IIC control line and the power to the corresponding IC.
					Is the output voltage (3.3 V) of the DC-DC converter low?	TP3881, TP3882	If RST2 does not become high after the unit is turned on, a shutdown will be generated in several seconds.
Blue 4	Abnormality in panel temperature				The 5.1 V power is not output.	POWER SUPPLY Unit (IC3901)	If TEMP1 that is read by the module microcomputer is 85 °C or higher, a shutdown will be generated.
					High temperature abnormality in the panel temperature sensor	PANEL SENSOR Assy (IC3901)	A shutdown occurs if the reading of TEMP1 detected by the module microcomputer is -20 °C or less. Also check the connection with the PANEL SENSOR Assy.
Blue 5	Short-circuiting of the speakers / D-AMP temperature abnormality				Low temperature abnormality in the panel temperature sensor	PANEL SENSOR Assy (IC3901)	Check if any speaker cable is in contact with the chassis.
					Speaker terminals	JA9301	Check if the AMP output is short-circuited.
Blue 6	Failure in communication with the module microcomputer				AUDIO_AMP	IC9201, IC9101	Check if cables are firmly connected.
					Periphery of the cable between IO3 and M8, and IO6 and P5	CN8803, CN4001, CN8806, P5	Check if cables are firmly connected.
Blue 7	Failure in main microcomputer 3-wire serial communication				Communication line between MAIN and MOD	IC3151, IC8401	Check if cables are firmly connected.
					Periphery of the cable between D11 and M1	CN3001, CN4101	Check the communication lines (TXD_MOD/RXD_MOD/REQ_MOD).
		IF microcomputer			Communication line between IF and MAIN	IC8301, IC8401	Check the communication lines (TXD_IF/RXD_IF/CLK_IF/BUSY_IF/CE_IF/REQ_IF).
		MULTI processor			Communication line between MULTI and MAIN	IC8001, IC8401	Check the communication lines (TXD_IC3/RXD_IC3).
Blue 8	Failure in IIC communication with the main microcomputer	Tuner 1			IIC communication line between Tuner (ANT-F) and MAIN	U6101, IC8401	Check the communication lines (SCL_TU/SDA_TU or SCL_AV5/SDA_AV5).
		MSP/MAP			IIC communication line between MSP/MAP and MAIN	IC9101, IC8401	Check the communication lines (SCL_AV/SDA_AV).
		AV switch			IIC communication line between AV-SW and MAIN	IC4601, IC8401	Check the communication lines (SCL_AV5/SDA_AV5).
		RGB switch			IIC communication line between RGB-SW and MAIN	IC4701, IC8401	Check the communication lines (SCL_AV5/SDA_AV5).
		Main VDEC			IIC communication line between M-VDEC and MAIN	IC4801, IC8401	Check the communication lines (SCL_MB/SDA_MB).
		VDEC SDRAM			IIC communication line between VDEC and SDRAM	IC4801, IC8402	Check the communication lines (SDRAM). Defective SDRAM
		AD/PLL			IIC communication line between ADC and MAIN	IC5001, IC8401	Check the communication lines (SCL_AV/SDA_AV).
		HDMI			IIC communication line between HDMI_RX and MAIN	IC5001, IC8401	Check the communication lines (SCL_MB/SDA_MB).
		Tuner 2			IIC communication line between Tuner (ANT-B) and MAIN	U6001, IC8401	Check the communication lines (SCL_AV5/SDA_AV5).
		US-MSP			IIC communication line between US_MSP and MAIN	IC6001, IC8401	Check the communication lines (SCL_AV5/SDA_AV5).
Blue 9	Failure in communication with the main microcomputer				Communication line between IF and MAIN	IC8301, IC8401	Check the communication lines (TXD_IF/RXD_IF/CLK_IF/BUSY_IF/CE_IF/REQ_IF).
Blue 10	FAN NG				Dirt attached to the fan motor	-	Check the fan. (SD10 does not detect it at the temperature that a fan does not turn.)
		FAN1			Periphery of the cable between FAN and M4	CN4103	Check if cables are firmly connected.
					Periphery of the fan control regulator	IC4310	Check that the voltage outputs it.
		FAN2			Dirt attached to the fan motor	-	Check the fan. (SD10 does not detect it at the temperature that fans do not turn.)
					Periphery of the FHD FAN CONNECT	FHD FAN CONNECT Assy	FAN NG
					Periphery of the cable between FA1 and M5, FAN and M4, and P42 and P45	CN9551 to CN9555, CN4108	Check if cables are firmly connected.
					Periphery of the fan control regulator	IC4303	Check that the voltage outputs it.

Frequency of LED Flashing	Major Type	Detailed Type	Log Indication in Factory Mode		Checkpoint	Possible Defective Part	Remarks
			MAIN	SUB			
Blue 11	High temperature of the unit	—	TEMP2	—	Temperature sensor or its periphery Periphery of the temperature sensor	TH9091 —	TEMP2 A shutdown occurs because of high temperature. TEMP2

Blue 13	Failure in the power supply	POWER SUPPLY	RST-MA	RELAY	The 12 V power is not output, RST4	POWER SUPPLY Unit	Check if V + 12 V is started.
					The 6.5 V power is not output	POWER SUPPLY Unit	Check if V + 6.5 V is started.
					The 5.1 V power is not output	POWER SUPPLY Unit	Check if V + 5.1 V is started.
					EMG_DDC	DC-DC converter CN4105	Check if the DC-DC converter is overloaded. Check if cables are firmly connected.
Blue 14	Home Media Gallery	HMG startup error	HMG	START	Periphery of the cable between P8 and M3 Periphery of connector	CN4111	Check if cables are firmly connected.
Blue 15	Main EEPROM	Main EEPROM communication error	MA-EEP	—	HNM power supply	IC4309, Q4304	Check if the voltage at a waveform check point is 5 V.
					IIC communication line between EEPROM and MAIN	IC8404, IC8401	Check the communication lines (SCL_EP/SDA_EP).

5.5 NON-FAILURE INFORMATION

5.5.1 INFORMATION ON SYMPTOMS THAT DO NOT CONSTITUTE FAILURE

■ Information on symptoms that do not constitute failure

Symptom	Cause, item to check, information
HDMI: Symptoms concerning the input format and settings	
The picture color for an INPUT 4 to 7 signal is not correct.	The color setting for INPUT 4 to 7 is not compatible with that of the output equipment. Check whether the color setting is YPbPr or RGB.
The video signal to INPUT 4 to 7 is not displayed, and a message is displayed.	A unsupported video signal is input.
The audio signal input to the INPUT 4 to 5 is not output. No HDMI signal is input.	The audio setting for INPUT 4 to 5 is any setting and a video signal is not input. If the audio setting is any setting to output an analog audio signal, the HDMI signal must be input. (If a DVI device is to be connected, use a DVI-HDMI conversion cable.) If the HDMI video signal is not input, the analog audio signal is not output.
No sound of signals to INPUT 4 to 7 is output.	The setting on the side of the HDMI output equipment is wrong. Example: Dolby Digital
The 1080p input signal is not displayed properly or at all, although the 1080i input signal is displayed properly.	Check that the connected cable supports HDMI Category 2. (As the clock frequency for the 1080p signal is triple that for the 1080i signal, signal degradation caused by a cable must not be neglected. A cable supporting HDMI Category 2 can be used for the 1080p signal. Although some conventional cables can support the 1080p signal, some others cannot.)
DIGITAL OUT	
Playback of the signal from the DIGITAL audio output connector is possible, but recording is not possible.	The video signal output from the DIGITAL connector is copy-protected.
Miscellaneous	
The no-signal off function is not activated.	The no-signal off and no-operation off functions are effective only if video (composite, S video, component, HDMI [excluding PC]) input or TV input is selected.
The no-operation off function is not activated.	
Power management does not function.	Power Management is effective only while an analog PC signal is being input. It is not effective with HDMI-PC signal input.
The AUTO SETUP function is not activated.	The Auto Setup function is effective only while an analog PC signal is being input. This function does not work if an analog PC signal is not input, even if the INPUT PC is selected.
Control via the SR connector is not possible.	Wrong connection of the cable to the PC INPUT (AUDIO) connector is suspected.
The audio signal from the PC is not output.	Wrong connection of the cable to the SR connector is suspected.
The picture-quality setting (AV Selection) is not stored.	The picture-quality setting is stored for each input. As the setting is changed when another input is selected, the user may have a false idea that the setting is not stored.
The picture size changes arbitrary.	The Auto Size setting is set to ON.
The display position of the screen changes slightly while the screen is on.	The orbiter function for minimizing the effects of phosphor burn is activated. Although the setting for this function can be changed on the Home menu, retaining the factory setting is strongly recommended.
The video signal to the S video connector is not displayed.	The component video cable is connected to the same input function as for the S video (even if no signal is input to the component video connector, merely having something plugged in to the connector will result in judgment that a signal is being fed in and the component video connector takes priority). (Priority of connectors: component video > S video > composite video)
The video signal to the composite video connector is not displayed.	The S Video or component video cable is connected to the same input function as for the composite video. (Priority of connectors: component video > S video > composite video)

SUPPLEMENT: On the video setting for HDMI

There are three types of HDMI output formats: color difference 4:4:4, color difference 4:2:2, and RGB4:4:4.

(The proportions, such as 4:4:4 and 4:2:2, represent those of the amount of data for video signal components. For example, as for color difference 4:4:4, the proportion of the amount of data as for Y, Cb, and Cr is 4:4:4.)

It is required to make the settings of the PDP according to the settings of the output equipment. For usual operation, however, set them to AUTO. If the color is inappropriate, make the settings manually.

In the HDMI system, video signals are coded at 24 bits per pixel and transmitted as a series of 24-bit pixels. In a case of color difference 4:4:4, Y, Cb, and Cr use 8 bits each. In a case of color difference 4:2:2, Y, Cb, and Cr use 12 bits each, but Cb and Cr are transmitted at a half sampling rate of Y. This unit is capable of processing the upper 10 bits out of 12 bits of video data. Recent high-end DVD players, such as Pioneer DV-79AVi, are capable of outputting 10-bit color-difference signals. In general, it is said that picture quality for color difference 4:2:2 format is assumed to be higher, because human eyes are more sensitive to luminance than to colors. In the case of RGB4:4:4, R, G, and B use 8 bits each.

5.5.1.1 CONFIRMATION ON THE HDMI CONTROL FUNCTION

When you use the HDMI Control (HDMI-CEC) function, if the unit does not function properly, such as not being able to control or recognize connected equipment, check the following:

- **Confirmation of the manufacturer of the connected equipment**

Check if the connected equipment was manufactured by Pioneer and if it supports the HDMI Control function. If its manufacturer is not Pioneer, proper operations are not guaranteed.

- **Confirmation of connections**

Check if the unit is connected properly, as shown in the figures below:
(For details, refer to "Making the HDMI Control connections" in the Operating instructions.)

Example 1: When an AV amplifier that supports HDMI Control is connected

Example 2: When an AV amplifier that does not support HDMI Control is connected

Example 3: When an AV amplifier is not connected

Check that the following conditions are met:

- The connected equipment must support the HDMI Control function.
- The equipment must be connected to the INPUT connector that has been selected in "Input Setting" on the HDMI Control Setting menu.
- The connections must be made properly, as shown in the above figures (in a case where an AV device, such as an AV amplifier, and a DVD recorder/BD player are connected, in a case where only a DVD recorder/BD player is connected, and in a case where an AV device, such as an AV amplifier, which does not support HDMI-CEC, is connected).
- When an AV device that supports the HDMI Control function is connected, it must be connected between the PDP and a DVD recorder/BD player.
- The HDMI Control function must be activated on the connected equipment (DVD recorder, BD player, AV device [AV amplifier, etc.]). (Refer to the Operating instructions of the connected equipment.)

A

• Confirmation of the number of connected devices

Check that the number of connected devices does not exceed the maximum number for guaranteed operations.

Equipment	Maximum Number
DVD recorder	2
BD player	2
AV System	1

B

• Confirmation of settings

Check that the settings for the HDMI Control function are properly made. (For details, refer to "Setting the HDMI Control" in the Operating instructions.)

Check that the following conditions are met:

- "Input Setting" on the HDMI Control Setting menu must be set to the same input as that to which the equipment that supports the HDMI Control function is connected.
- When Power Off Control, Power-On Ready, or Hold Sound Status are to be used, their settings must be On.

C

• Confirmation of operations

Check that the HDMI Control function works properly.

- (1) Connect a device that supports the HDMI Control function.
- (2) Perform the procedures that are required after changing connections, which are described in "Making the HDMI Control connections" in the Operating instructions.
 - 1 Turn on the plasma television and all the connected devices.
 - 2 Confirm that the setting in "Input Setting" for "HDMI Control Setting" is properly entered according to the connected devices. Also confirm the HDMI Control related settings in the connected devices.
 - 3 Switch to the HDMI input terminals to which the devices are connected to check if audio and video images are properly output and displayed.
 - 4 Try turning off the plasma television, then turn the power back on to the plasma television.
- (3) Perform "Power On Test" or "Power Off Test" on the HDMI Control Setting menu. (For details, refer to "Power On/Off Test" in the Operating instructions.)

E

If the following occurs even if the operation check is performed properly, a failure, such as breakage of the HDMI cable, problems on the side of the connected device, and problems with the MAIN Assy, may be suspected:

- "Power On Test" or "Power Off Test" cannot be selected (the items are grayed)
- The connected device cannot be turned on/off.

In some cases, an operation check using another HDMI input connector may be required in order to narrow down the cause.

F

5.5.2 FUNCTION OF DECREASING THE BRIGHTNESS LEVEL

■ High-temperature protection function 1

If the panel temperature (TEMP1) reaches 80 °C, the limit for the maximum count of plasma discharge will be gradually decreased to lower the temperature of the panel.

- This function is activated based on the TEMP1 temperature.
- The limit for the maximum count of plasma discharge will be decreased 8 per 5 seconds.
- The lowest limit for the maximum count of plasma discharge is about 700.
- The maximum count of plasma discharge will begin to increase gradually if the panel temperature falls to the specified temperature.

■ High-temperature protection function 2

If the panel temperature (TEMP1) reaches 55 °C, the plasma-discharge count that is determined based on the input APL will be decreased. In actual operation, the ABL adjustment value will be offset.

- This function is activated based on the TEMP1 temperature.
- The ABL adjustment value will be decreased by one step per 30 seconds.
- The ABL adjustment value will begin to increase gradually if the panel temperature falls to the specified temperature.

■ Panel protection function 1 (protection against still picture)

If a still picture is displayed for 3 minutes or more, the limit for the maximum count of plasma discharge will be gradually decreased to minimize the effects of phosphor burn.

- This function is activated after detection if the displayed picture is still (the picture will be considered to be still if only the mouse cursor is moved).
- The limit for the maximum count of plasma discharge will be decreased 8 per 5 seconds.
- The lowest limit for the maximum count of plasma discharge is about 700 (it takes about 15 minutes to reach the lowest limit, although the required time varies depending on the displayed picture).
- The maximum count of plasma discharge will begin to increase gradually if the displayed picture is changed to animated picture.

Note: How to decrease the brightness level in this function is the same as in high-temperature protection function 1.

■ Panel protection function 2 (SCAN IC protection)

If a particular load is applied to the SCAN IC, the limit for the maximum count of plasma discharge will be gradually decreased.

Note: How to decrease the brightness level in this function is the same as in high-temperature protection function 1.

■ Panel protection function 3 (protection against panel cracking)

A bright window, as shown in the figure on the right, on the screen increases the heat of the panel. If such a pattern is recognized on the screen, the limit for the maximum count of plasma discharge will be gradually decreased.

Note: How to decrease the brightness level in this function is the same as in high-temperature protection function 1.

Detection example: SCAN IC protection

Detection example: Protection against panel cracking

5.6 OUTLINE OF THE OPERATION

5.6.1 PANEL DRIVE-POWER ON / OFF FUNCTION

Function:

It is an operational mode where the digital signal processing performs circuit operation but the power is not supplied to the panel driving system (Vsus, VAddress) in order to avoid a power down (PD).

Application:

1. When it is necessary to check whether the signal output is correctly reaching the drive system in a repairing activity etc.
2. In the case of a PD, to determine whether the problem is with the panel drive-power supply or with the other system power supply.

Method:

1. Short-circuit between the specified location of the POWER SUPPLY Unit and GND (Multi base section recommended), using a jumper with alligator clips (refer to the photos below).
2. Execute [DRV S00] by RS-232C command. ([DRV S01] for release)

Supplemental explanation:

- When the panel drive-power is in OFF state, there will be no PD, except PS_PD, as the PD signal has been muted.
- If the clip is removed in the OFF state of the panel drive-power, PD will take place at the instance of clip removal. Therefore, be sure to remove the clip after turning the power OFF.
- Under RS-232C command control, [DRV S01] (release) is possible during power ON. However, there is a possibility of damaging the set. Therefore, make this operation only after turning the power OFF.
- Command [DRV S00/S01] is effective even during standby.
- When the main power switch is set to OFF, no command is accepted.
- When the AC power cord is unplugged, the panel drive-power OFF state established by the [DRV S00] command is canceled. (The panel drive-power OFF state remains in effect even if the main power switch is set to OFF after that command is sent.)

When the panel drive-power is ON

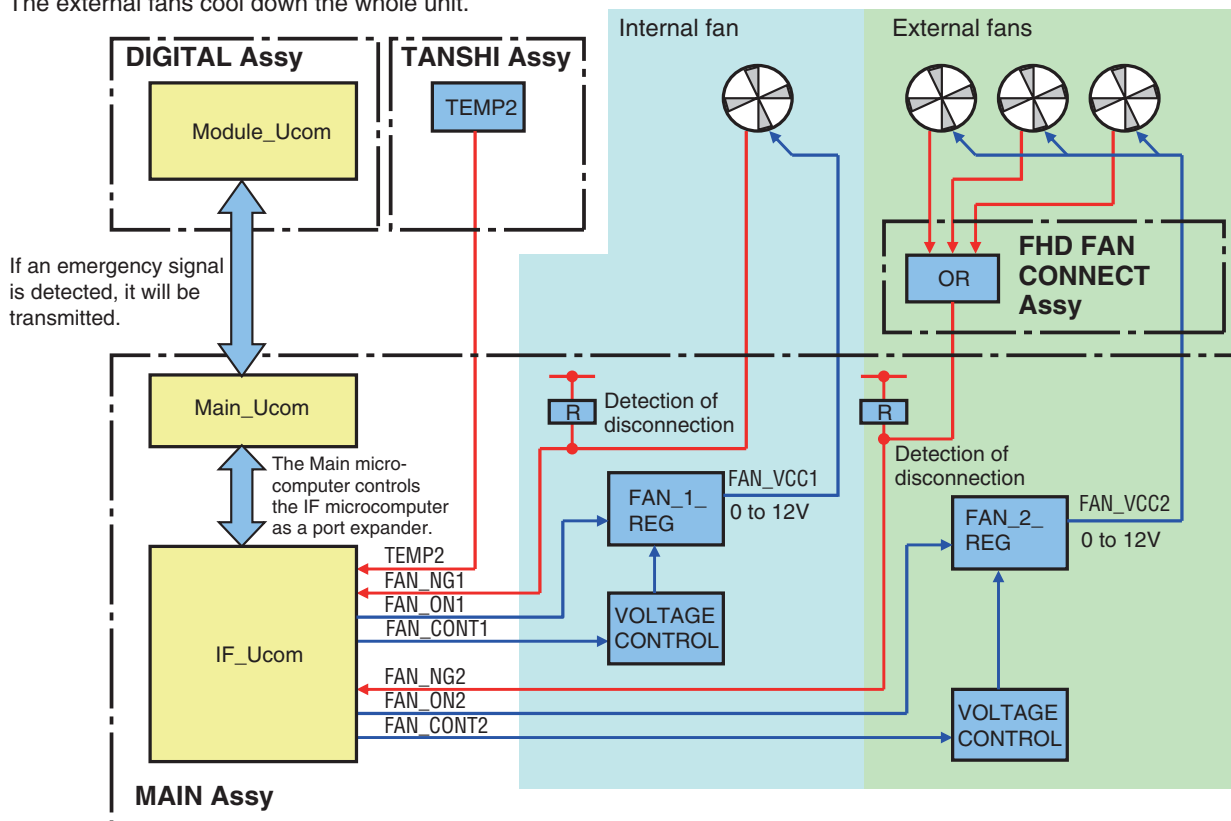

When the panel drive-power is OFF

5.6.2 SPECIFICATION OF THE FAN CONTROL

■ Block diagram

The internal fan cools down the MTB and Power blocks.
The external fans cool down the whole unit.

■ Operation specifications

Notes:

- The operating temperature of the fan is higher than the ambient temperature, because the sensor temperature is read by the microcomputer.
- If the critical values for signals are displayed in the address circuit, the fan may be activated or be rotated at higher speed in response to values lower than the set temperature values shown above.
- When the temperature rises, the sensor voltage of TEMP2 decreases.
- When the voltage of the DAC output for external FAN decreases, rotation speed of FAN rises.

5.6.3 PROCESSING IN ABNORMALITY

Protection of the Power Amplifier

● Circuit configuration

● Specifications for port monitoring

Port Name	SD/PD Indication	Active	Monitoring conditions	Operation
A_NG_B	AUDIO	Shutdown occurs when the signal is "L." 30 mS * 3 times	RST4 = "H" (always) (Monitoring starts 2 sec after the above conditions are established.)	The main CPU operations described below will be performed when either "A_NG_B = L" or "OTW = L" is detected (established) under the monitoring conditions.
OTW	AUDIO	Shutdown occurs when the signal is "L." 130 mS * 3 times		

● Operation specifications of the main CPU

- (1) When a shutdown decision is made by the main CPU
 - After a warning indication is displayed for 5 sec, a shutdown is generated (the blue LED flashes 5 times).
 - A warning indication is displayed for all input-signal types.
 - Example of a warning indication: "The speaker terminals are short-circuited. After reconnection, turn the unit on again."
(For 50-inch models) (For 42-inch models, an indication declaring a forced power-off is displayed.)

- (2) Display conditions
 - When the panel is on: A warning indication is displayed immediately.
 - When the panel is off: A warning indication is not displayed immediately but is displayed when the panel is turned on.

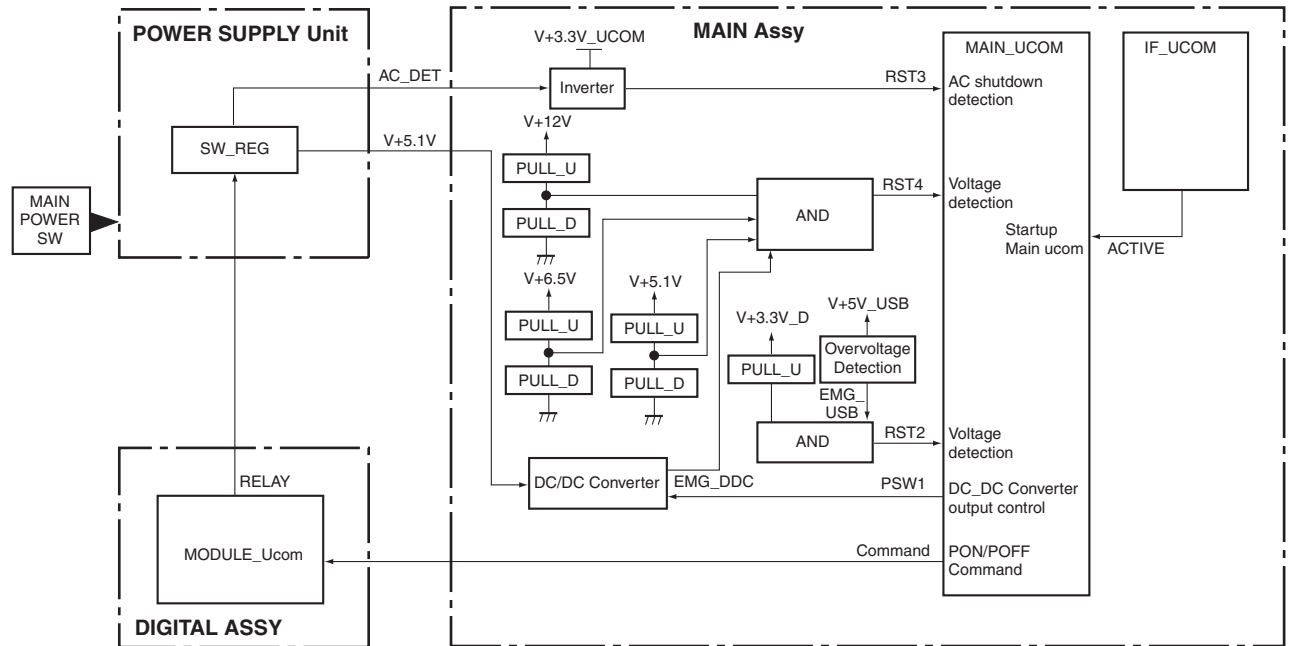

Note: A warning indication is displayed each time the panel is turned on if the conditions for a shutdown persist.

● Conditions for resetting the circuits

The circuits will be reset upon Standby ON/OFF.

Power supply and DC-DC converter

● Circuit configuration

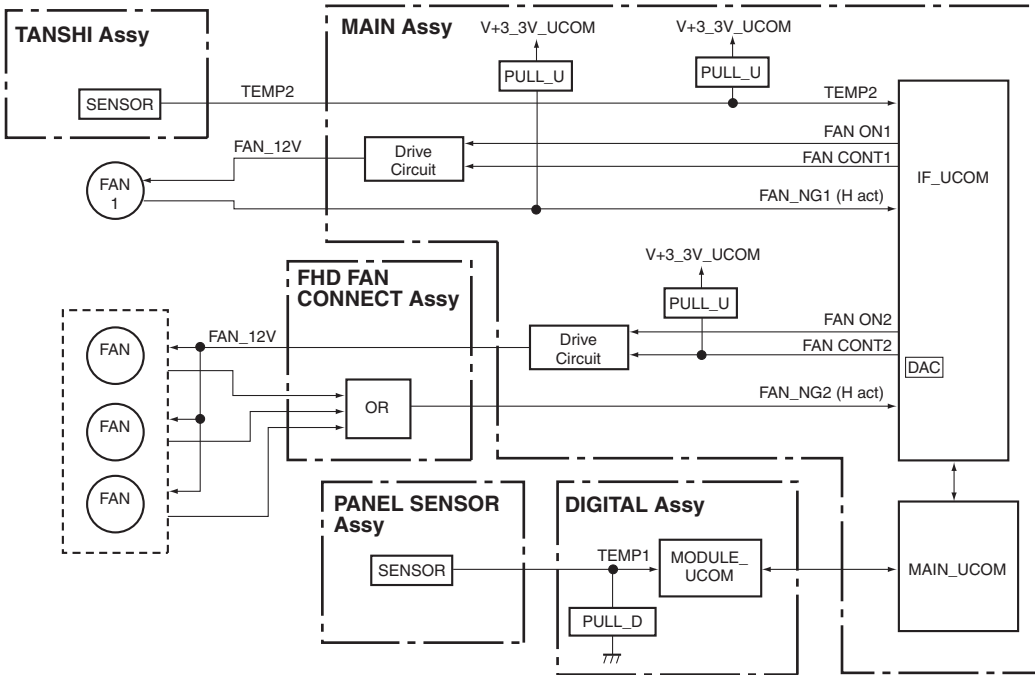

● Specifications for port monitoring

Port Name	SD/PD Indication	Active	Monitoring conditions	Operation
RST2	ASIC power (M-DCDC)	Shutdown occurs when the signal is "L." for 5 sec after PSW1 is ON. or for 2 sec while the unit is ON.	<ul style="list-style-type: none"> Panel ON (RST4 = H and PSW1 = L) While awaiting restoration of RST2 (RST2 = L) 	<p>The SD timer starts when "RST2 = L" is detected under monitoring conditions. If "RST3 = H," "M_SW_DET_B = H," or "RST4 = L" is detected, or if a power-down or shutdown in the module microcomputer system is not generated, the unit waits for 30 mS. Then, if the SD timer continues to count for 2 sec or more, a shutdown is determined, and a shutdown process starts. A specific LED flash pattern (blue LED, 13 times) starts. The next PON operation is valid, and the flag is cleared upon the next power-on.</p> <p>If RST2 is H, a restoration process starts according to the latest power-on/off status.</p>
RST3	AC power	AC_OFF when the signal is "H."	<ul style="list-style-type: none"> Active STB (including SD/PD statuses) Functional STB Panel ON (Areas other than North America) While the main power switch is set to OFF (M_SW_DET_B = H) (North America) While the main power switch is set to OFF (M_SW_DET_B = H) While awaiting restoration of AC power (RST3 = H) While awaiting restoration of RST2 (RST2 = L) While awaiting restoration of RST4 (RST4 = L) 	<p>If "RST3 = H" (AC_OFF) is detected under the monitoring conditions, a power-off process starts. Monitoring of the RST3 port is continued, while monitoring of other ports is interrupted. Communication is controlled only by the IF microcomputer. The port outputs are set as specified. If the signal at the RST3 port continues to be H after 30 mS of waiting, monitoring is continued. If RST3 is L, a restoration process starts according to the latest power-on/off status.</p>
RST4	MAIN power (RELAY)	Shutdown occurs if the signal is "L." for 5 sec after RELAY is ON. or for 2 sec while the unit is ON or in Functional STB.	<ul style="list-style-type: none"> Functional STB Panel ON (Areas other than North America) While the main power switch is set to OFF (M_SW_DET_B = H) While awaiting restoration of RST2 (RST2 = L) While awaiting restoration of RST4 (RST4 = L) 	<p>The SD timer starts when "RST4 = L" (power-off of devices in the functional STB system) is detected under monitoring conditions. The RST4 initialization process starts, and input monitoring, communication setting, and output-terminal setting are performed. The RST4-SD timer starts. If either "RST3 = H" or "M_SW_DET_B = H" is detected, or if a power-down or shutdown in the module microcomputer system is not generated, the unit waits for 30 mS. Then, if the SD timer continues to count for 2 sec or more, a shutdown is determined, and a shutdown process starts. A specific LED flash pattern (blue LED, 13 times) starts. The next PON operation is valid, and the flag is cleared upon the next power-on. If RST4 is H, a restoration process starts according to the latest power-on/off status.</p>

Fan and temperature sensor

● Circuit configuration

● Specifications for port monitoring

Port Name	SD/PD Indication	Active	Monitoring conditions	Operation
FAN_NG1	FAN1	Shutdown occurs when the signal is "H." 1 S * 3 times	RST4 = H and FAN_ON1 = H (Monitoring starts 3 sec after the above conditions are established.)	If FAN_NG1 (for details on detection logic, see "File of fan-control specifications") is detected (established) under the monitoring conditions, a shutdown process starts. A specific LED flash pattern (blue LED, 10 times) starts. The next PON operation is valid, and the flag is cleared upon the next power-on.
FAN_NG2	FAN	Shutdown occurs when the signal is "H." 1 S * 3 times	RST4 = H and FAN_ON2 = H (Monitoring starts 3 sec after the above conditions are established.)	If FAN_NG2 (for details on detection logic, see "File of fan-control specifications") is detected (established) under the monitoring conditions, a shutdown process starts. A specific LED flash pattern (blue LED, 10 times) starts. The next PON operation is valid, and the flag is cleared upon the next power-on.
TEMP2	High temperature at MTB	Shutdown occurs if any values equal to or greater than minimum to require a shutdown are detected. 1 S * 3 times	RST4 = H (Monitoring starts 1 sec after the above conditions are established.)	If any values equal to or greater than minimum to require a shutdown are detected (established) under the monitoring conditions, a warning indication will be displayed for 30 sec, after which a shutdown process starts. A specific LED flash pattern (blue LED, 11 times) starts. The next PON operation is valid, and the flag is cleared upon the next power-on.
TMP_NG	High temperature in the drive circuits	Shutdown occurs if any values equal to or greater than minimum to require a shutdown are detected. 200 mS * 5 times (average)	Digital video RST2 = H	If any values equal to or greater than minimum to require a shutdown is detected (established) under the monitoring conditions, those changes in status will be transmitted to the main microcomputer via the UART. Upon receiving the data, a warning indication will be displayed for 30 sec, after which a shutdown process starts. The main microcomputer orders a specific LED flash pattern (blue LED, 4 times). The next PON operation is valid, and the flag is cleared upon the next power-on.
	Low temperature in the drive circuits			If any values equal to or greater than minimum to require a shutdown is detected (established) under the monitoring conditions, those changes in status will be transmitted to the main microcomputer via the UART. Upon receiving the data, the main microcomputer orders a specific LED flash pattern (blue LED, 4 times). The next PON operation is valid, and the flag is cleared upon the next power-on.

5.6.4 TRAP SWITCH

● Outline and Notes

For video data transmission inside this Plasma Display, digital signals are used. Therefore, this unit adopts the HDCP (High-bandwidth Digital Content Protection) system for copyright protection. This unit is also provided with a detection switch (TRAP switch) that will prohibit the unit from being turned on again "if the rear case of the unit is accidentally opened," in order to prevent the panel technology from being leaked out.

The TRAP switch is disabled while the unit is turned off.

When performing internal diagnosis of the PDP, fix the switch to the OFF position using adhesive tape before turning on the unit. After servicing, be sure to remove the adhesive tape.

WHEN THE TRAP SWITCH IS ACTIVATED

When the TRAP switch is activated, the red and blue LEDs will light.

In order to deactivate the TRAP switch, close the upper plate of the unit or fix the TRAP switch to the OFF position in the manner described above.

Then, follow procedures (1) or (2) below:

(1) Deactivating with the remote control unit

- Enter Factory mode.
- Proceed to the INITIALIZE layer of Factory mode. Hold the DISPLAY key pressed for more than 5 seconds.

(2) Deactivating with the RS-232C command

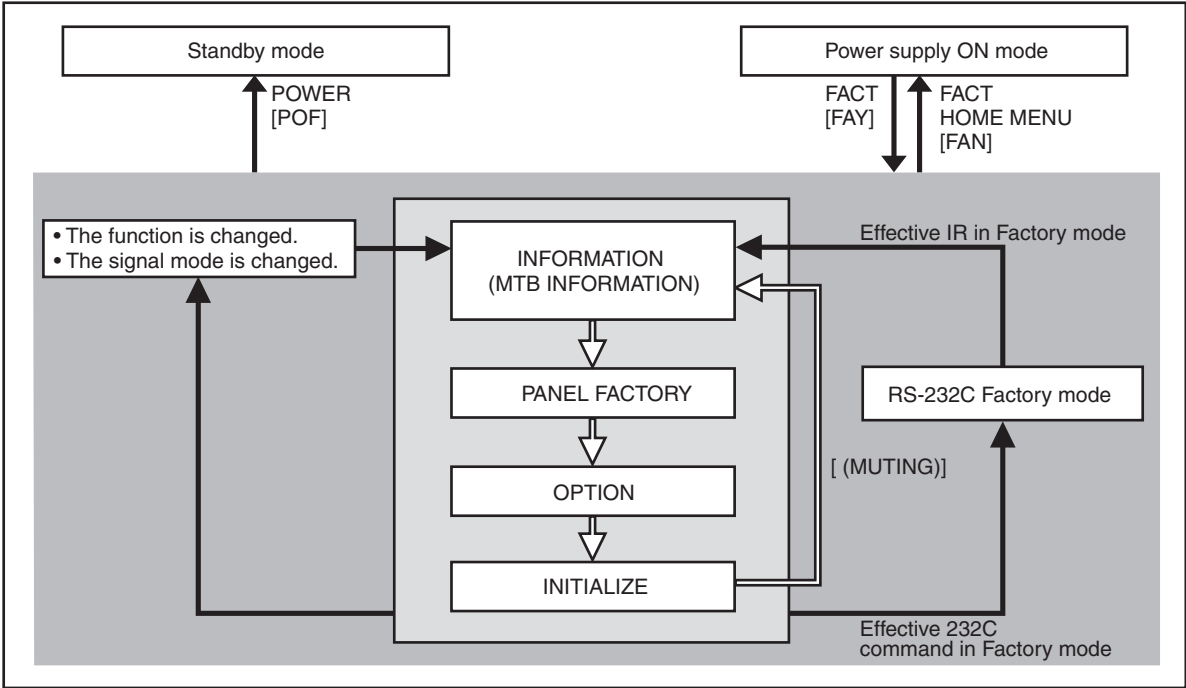

- Send the CTM (cancel) command.

6. SERVICE FACTORY MODE

6.1 OUTLINE OF THE SERVICE FACTORY MODE

A Operations during Service Factory mode are described here.

6.1.1 SERVICE FACTORY MODE TRANSITION CHART

6.1.2 HOW TO ENTER/EXIT SERVICE FACTORY MODE

■ How to enter Service Factory Mode

By using a PDP service remote control)

- PDP service remote control : Press [FACTORY] key.

By issuing RS-232C commands)

- During normal Standby mode : Issue [PON] then [FAY].
- During normal operation mode : Issue [FAY].

■ How to exit Service Factory Mode

By using a PDP service remote control)

- PDP service remote control : press [FACTORY] key.
- Supplied remote control unit : press [HOME MENU] key.

By issuing RS-232C commands)

- Issue [FAN].

■ How to enter Service Factory Mode by Using the supplied Remote Control Unit

- Same as previous model. Please refer to the technical document (Service Know-how).

6.1.3 FUNCTIONS WHEN ENTERING THE SERVICE FACTORY MODE

■ Functions whose setting are set to OFF

The settings for the following functions are set to OFF when Service Factory mode is entered (including when the “FAY” command is received) :

Function	Remarks
2-Screen Operation	Input function set on the main side is selected.
FREEZE	
Auto size, Side Mask	It is not performed during Factory mode.
ORBITER, Mask control	Central value operation (ORBITER)
Sleep Timer	Cancel the operation.
Room light sensor	Turn off the detecting operation (Setting data will be retained.)
Blue LED dimmer	Turn off the operation (Setting data will be retained.)
Detection of the TRAP switch	The detection operation is stopped.
TRAP history	To a possible turning on though the memory is maintained.
Display of TV guide	Finish the TV-GUIDE function.
Setting of Parental Control	When this is turned off, the block of the screen is released.
Power Control	Turn off the operation (However, the setting maintains it.)
Image Position	Central value operation

Note: Enter the factory after cancelling ACI because the ACI operation setting OFF and not done.

■ User data

User data will be treated as follows :

- User data on picture-quality and audio-quality adjustments are not reflected, and factory-preset data are output (user data will be retained in memory). When the unit enters Service Factory mode, the current audio-quality adjustment data will be still be retained in memory.
- User-setting data will be applied to the various settings (items on the menus), signal formats, and the items that are associated with path change (HDMI settings, etc.).
- Data on screen (i.e., screen position; meaning clock dividers, and not including data on screen size). Are reset to the default values (data stored in memory will be retained).
Screen size will be retained.

1 2 3 4

6.1.4 REMOTE CONTROL CODE IN SERVICE FACTORY MODE

Remote Control Keys	Basic Functions	Remarks
MUTING	Switching the main items.	Shifting to the next main item (top).
↓ (DOWN)	Switching the subtitled items.	Shifting downward to the next subtitled item.
↑ (UP)	Switching the subtitled items.	Shifting upward to the next upper layer.
← (LEFT)	Decreasing the adjustment value.	Decreasing the adjustment value.
→ (RIGHT)	Increasing the adjustment value.	Increasing the adjustment value.
ENTER/SET	Switching the layers.	Shifting downward or upward to the next lower or upper layer.
INPUT	Selecting INPUT.	Shifting the INPUT to the next function.
INPUTxx	Selecting INPUT.	Switching the INPUT to xx. (xx=1 to 7 etc)
CH+/P+	Increasing the channel number.	
CH-/P-	Decreasing the channel number.	
Numeric Keys	Function: TV	Function: TV (previously selected channel number is selected)
POWER	Power OFF.	Turning the power off.
FACTORY	Factory OFF (Factory mode)	In Factory mode, turning Factory mode off.
	Factory ON (Non-Factory mode).	In Non-Factory mode, turn Factory mode on.
HOME MENU	Menu ON.	In Factory mode, turn Factory mode off.
VOLUME+	Volume UP.	Increasing 10 the adjustment value. (PANEL FACTORY)
VOLUME-	Volume DOWN.	Decreasing 10 the adjustment value. (PANEL FACTORY)
DRIVE OFF (Note1)	Drive Mode OFF.	Turning Drive mode off.
INTEGRATOR	INTEGRATOR MENU ON.	Enter INTEGRATOR MODE.

(Note 1) When ten seconds have passed since the [DRIVE OFF] key was pressed at the standby, it becomes invalid.
Please press [POWER] key from the [DRIVE OFF] key pressing within ten seconds when you do power supply ON while driven OFF.

PDP service
remote control

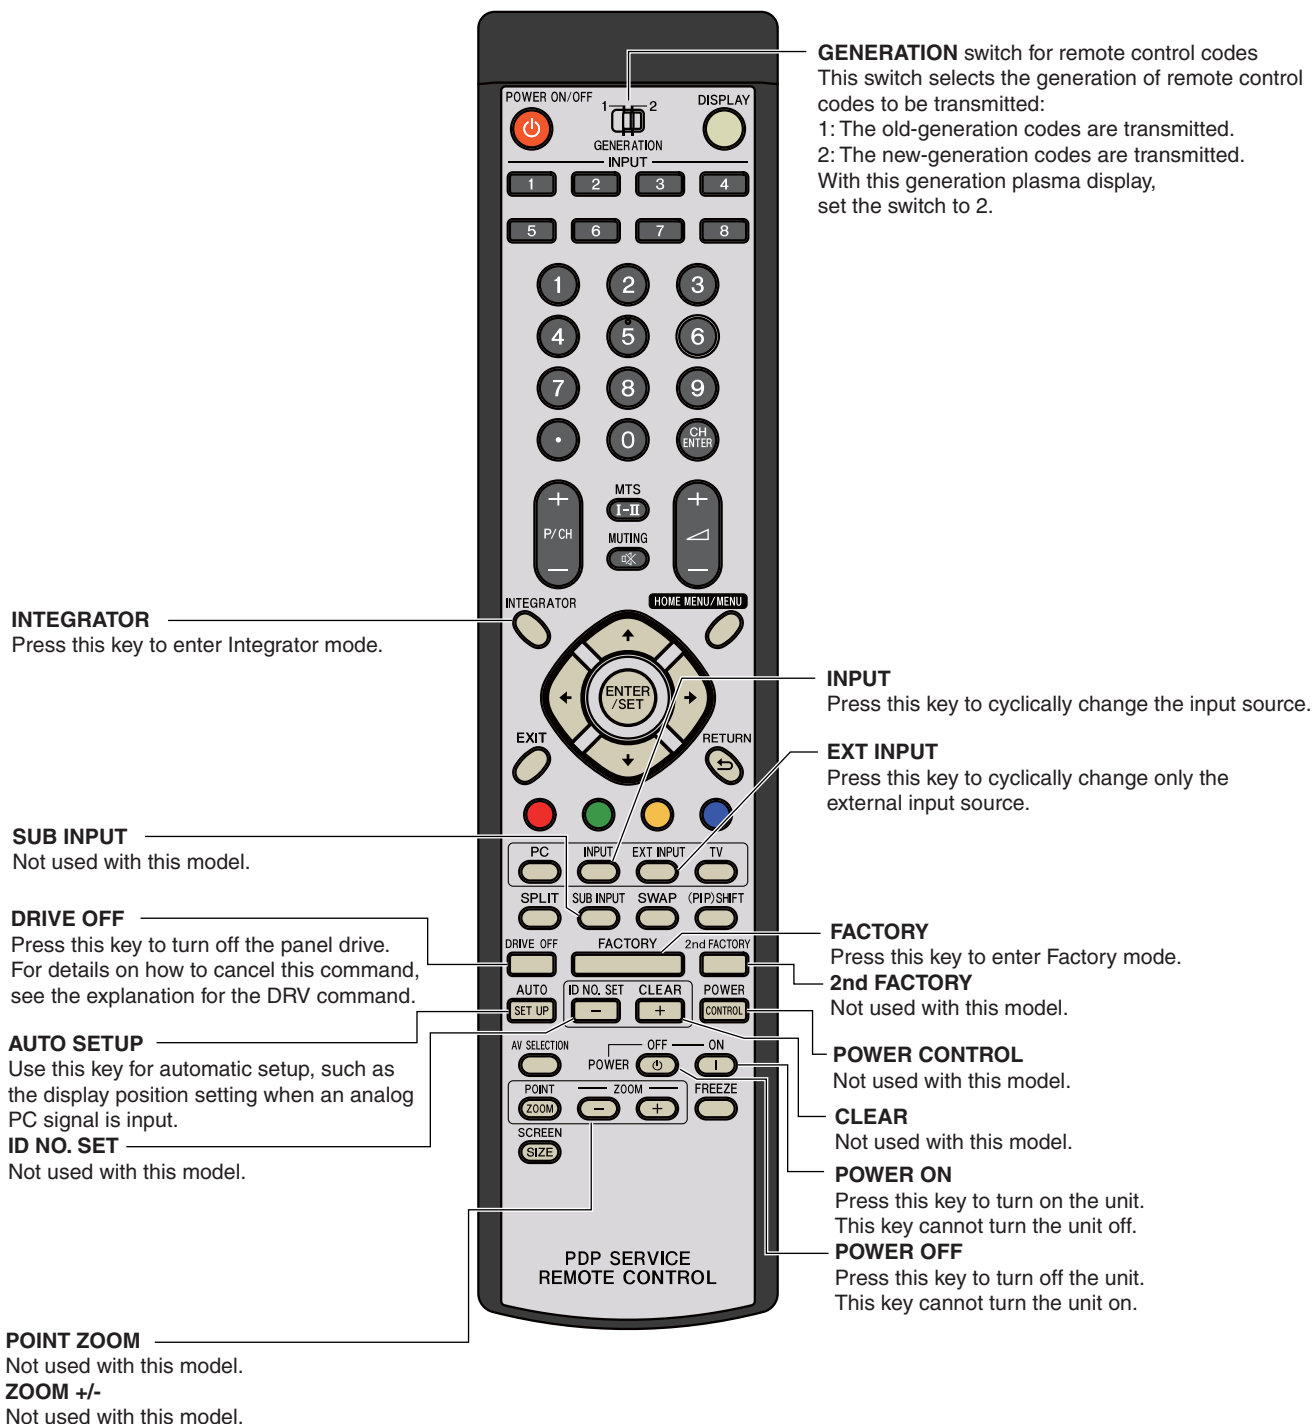

PDP-6010FD

6.1.5 PDP SERVICE REMOTE CONTROL

- The keys labeled with the same names on the service remote control unit have the same functions as those of the supplied remote control unit. (See "2.3 PANEL FACILITIES.")
- For the keys not provided on the supplied remote control unit, see the explanations below:

MTB side's Shutdown NG information

OSD: MAIN	OSD: SUB	Cause of Shutdown
AUDIO	----	Short-circuit of the speaker terminal or failure of audio amplifier.
MODULE	----	Failure of communication to Module microcomputer.
MA-3L		3-wire Serial Communication of Main microcomputer.
	IF	Communication failure of IF microcomputer
	MULTI	Multi Processor communication failure
MA-IIC		IIC Communication failure of Main microcomputer
	FE1	Analog Tuner 1
	FE2	Analog Tuner 2
	MSPMAP	MSP/MAP
	AV-SW	AV Switch
	RGB-SW	RGB Switch
	VDEC	VDEC
	SDRAM	VDEC - SDRAM
	ADC	AD/PLL
	HDMI	HDMI
	US-MSP	MSP
MAIN		Communication failure of Main microcomputer
FAN	FAN1	Fan stopped
	FAN2	Fan stopped (Only with models having the Full HD panel)
TEMP2		Abnormally high temperature at MTB.
DTUNER		Failure of Digital Tuner
	PS/RST	Failure to DTV Starting
	RETRY	DTV communication error
	DE-BCM	Abnormally in BCM7038
	DE-FE	Tuner 1 or 2
	DE-CAS	Card I/F IC
	DE-VBI	VBI Slicer
	DE-EPI	EEPROM
	TV-G	TV-Guide Error
	HOME-G	Failure at Home Gallery
	DTVMID	Middleware
	DTVAPP	Application
RST-MA	M-DCDC	Abnormally in RST2 of MAIN Assy. (power decrease of DC-DC converter)
	RELAY	Abnormally in RST4 of MAIN Assy. (power decrease of Relay power)
HMG		Failure at Home Media Gallery
	HMG	Home Media Gallery startup error
MA-EEP		IIC communication line between EEPROM and MAIN.

Operation:

Even if [←] key or [→] key is pressed, {CLEAR <=> :YES} ⇔ {CLEAR <=> :NO} is repeated.
 If the [ENTER/SET] key is kept on pressing for 5 second when the status of this menu is <YES>, clear process will begin.

6.2.1.5 TEMPERATURE

A present temperature and the FAN rotation are displayed.
If either [←] key or [→] key is pressed, the display data is refreshed.

	1	5	10	15	20	25	30	35	40
1									
5									
10									
15									
16									

• Display/Meaning

TEMP1 : The temperature of the sensor on the panel side is displayed by the Fahrenheit (F).

TEMP2 : The temperature conversion display is done with 10 bit the A/D input value of IF uCOM 90 pin (AN4). It is displayed by both the Fahrenheit (F) and 8 bit A/D value.

(Remark:When temperature (F) of the sensor becomes more than a specified temperature, the shutdown start of processing.)

FAN1 : The value of the FAN rotating state is displayed.

STOP: stopped, LOW: slow speed, HIGH: high speed.

FAN2 : The value of the rotation state of FAN is displayed.

During a rotation of FAN, 8bit D/A value output from 2 pin (DA0) of IF uCOM is displayed.

It is displayed with OFF during a stop (only for the FHD model).

B-SENSOR : The value that indicated the degree of brightness input into an Room light sensor is displayed.

AD value when the output of the Room light sensor was input into 89 pin (AN5) of IF uCOM is displayed.

6.2.1.6 HOUR METER

POWER ON COUNTER	P-COUNT	00000095 TIMES	QS3
SYSTEM SERIAL	SERIAL		QS3

Note: The PANEL-side's HOUR METER/P-COUNT acquires information from the PANEL-side.

• MTB HOUR METER

In HOUR METER screen on Factory Menu, press the [ENTER] key, and then it moves to the screen to clear MTB HOUR METER. (MTB HOUR METER is cleared only.)

1	5	10	15	20	25	30	35	40
1								
5								
10								
15								
16								

Operation:

Even if [←] key or [→] key is pressed, {CLEAR <=> :YES} ⇔ {CLEAR <=> :NO} is repeated.
 If the [ENTER/SET] key is kept on pressing for 5 second when the status of this menu is <YES>, clear process will begin.
 MTB HOUR METER is cleared only. PANEL HOUR METER is not cleared.

6.2.1.7 HDMI SIGNAL INFO 1

A

B

Displays the input signal information of HDMI terminal

Item	Meaning
PWR5V	+5 V power detection (18 pin of HDMI terminal)
VSYNC	VSYNC detection
CKDT	Clock detection
SCDT	SYNC detection
DCRPT	HDCP decryption status
AUTHEN	HDCP authentication status
MODE	HDMI mode status
BIST	----
NVAL	N value
CTSVAL	CTS value
AKSV	Shadow AKSV value
BKSV	Shadow BKSV value
IT CNT	IT content (AVI info)
EXTCOL	Extension calorimetry (AVI info)
RGV QR	RGB range (AVI info)
PIXDEP	Number of pixel/bit

C

D

E

F

6.2.1.8 HDMI SIGNAL INFO 2

Displays input signal status of HDMI terminal

Display Item	Meaning
H RES	Number of horizontal pixels (decimal)
V RES	Number of vertical lines (decimal)
H DE	Number of effectively horizontal pixels (decimal)
V DE	Number of effectively vertical lines (decimal)
INTRL	Interlace (=INT) or progressive (=PRG)
V POL	VSYNC polarity
H POL	HSYNC polarity
AUDIO (first line)	Sampling frequency. (ex. DVD: 48kHz, CD: 44.1kHz) *1
AUDIO (second line)	PCM (PCM) or No PCM (=no PCM)
AUDIO (third line)	Quantization bit
COL SP	Color space (AVI Info) (422 or 444 or RGB) *2
COLMET	N/A
ASPECT	Aspect (AVI Info)
ACTIVE	Video active format (AVI Info)
V FMT	Video identification code (AVI Info)
PIX RP	N/A
SOURCE (first line)	Vendor name of the emission device
SOURCE (second line)	Model name of the emission device

*1: Confirm if this item is displayed when the audio is not outputted.

*2: If may not match to the state of source devices when the color is abnormal.

Display of HDMI FACTORY and correspondence of resolution

6.2.2 PANEL FACTORY (+)

A

■ Operation Items

This is the menu screen for the adjustment of the panel. Data acquisition and value adjustment can be performed for the following items:

No.	Indication	Description of functions
6.2.2.1	PANEL INFORMATION	Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed.
6.2.2.2	PANEL WORKS	Operation data, such as accumulated pulse-meter count, accumulated hour-meter count, accumulated power-on count, and the temperature detected by the sensor, are displayed.
6.2.2.3	POWER DOWN	The power-down history is displayed, with the hour-meter values that indicate the hour values when power-downs occurred.
6.2.2.4	SHUT DOWN	The shutdown history is displayed, with the hour-meter values that indicate the hour values when shutdowns occurred.
6.2.2.5	PANEL-1 ADJ (+)	Settings of the driving pulse timing and driving voltage can be performed.
6.2.2.6	PANEL-2 ADJ (+)	White balance and ABL (power consumption) for the panel can be set.
6.2.2.7	PANEL FUNCTION (+)	Perform panel-degradation correction-level setting, phase adjustment of the address, and the streaking-correction setting.
6.2.2.8	ETC. (+)	Copying of backup data and clearance of various data can be performed.
6.2.2.9	RASTER MASK SETUP (+)	The mask indication (RASTER) can be set and indicated.
6.2.2.10	PATTERN MASK SETUP (+)	The mask indication (PATTERN) can be set and indicated.
6.2.2.11	COMBI MASK SETUP (+)	The mask indication (COMBI) can be set and indicated.

■ Details of indications in each layer

- In the following examples, GUI images for a 50-inch and 60-inch models are indicated.

6.2.2.1 PANEL INFORMATION

- Data, such as the version of the microcomputer of the panel, product serial number, and statuses of memories for adjustment values for the main unit and for backup, are displayed. No other layers are nested below this layer, and there are no adjustment items.

	1	5	10	15	20	25	30	32
1			PANEL FACT.		VD1-10605-NTV-ATB			
	1		PANEL INFORMATION					
	2		MODULE	= 02 F		05 F

16	E							

■ Key operation

- <DOWN> : Shifting to PANEL WORKS
- <UP> : Shifting to COMBI MASK SETUP (+)
- <L/R> : Updating displayed information

■ Display items:

- MODULE : The version of data written in the Module microcomputer (IC3601) is indicated.
- PRG : The program version of the Module microcomputer is indicated.
- DAT : The data version of the Module microcomputer is indicated.
- SEQ-PRS : The version of data written in the Sequence LSI (IC3301) is indicated.
- PRG : The program version of the Sequence LSI is indicated.
- PIC : The Picture-data version of the Sequence LSI is indicated.
- SEQ : The sequence-data version of the Sequence LSI is indicated.
- SERIAL : The serial number of the module is indicated.
- DIG.EEP : The adjusted status of the EEPROM that is mounted on the DIGITAL Assy is indicated.
- BACKUP : The adjusted status of the EEPROM for backup that is mounted on the SENSOR Assy is indicated.

6.2.2.2 PANEL WORKS

- Data on operations, such as the accumulated pulse-meter counts, hour-meter count, power-on count, and temperature detected by the sensor, are sent back. No other layers are nested below this layer, and there are no adjustment items.

	1	5	10	15	20	25	30	32

■ Key operation

- <DOWN> : Shifting to the next item
<UP> : Shifting to the previous item
<RIGHT> : Adding by one to the adjustment/
setting value
<LEFT> : Subtracting by one from the
adjustment/setting value
<VOL+> : Adding by 10 to the adjustment/
setting value
<VOL-> : Subtracting by 10 from the
adjustment/setting value
<SET> : Determining the adjustment/setting
value and shifting to the upper layer

The ABL/WB adjustment values are grouped into up to four tables, depending on the drive sequences. The adjustment value for the actually driven table is displayed. The number of the adjustment table and the drive sequence currently selected are displayed on the right side of the third line as the On-Screen display.

Drive sequence and adjustment table

6.2.4.4 Wide XGA AUTO <=>

Exclusively used for technical analysis (details omitted).

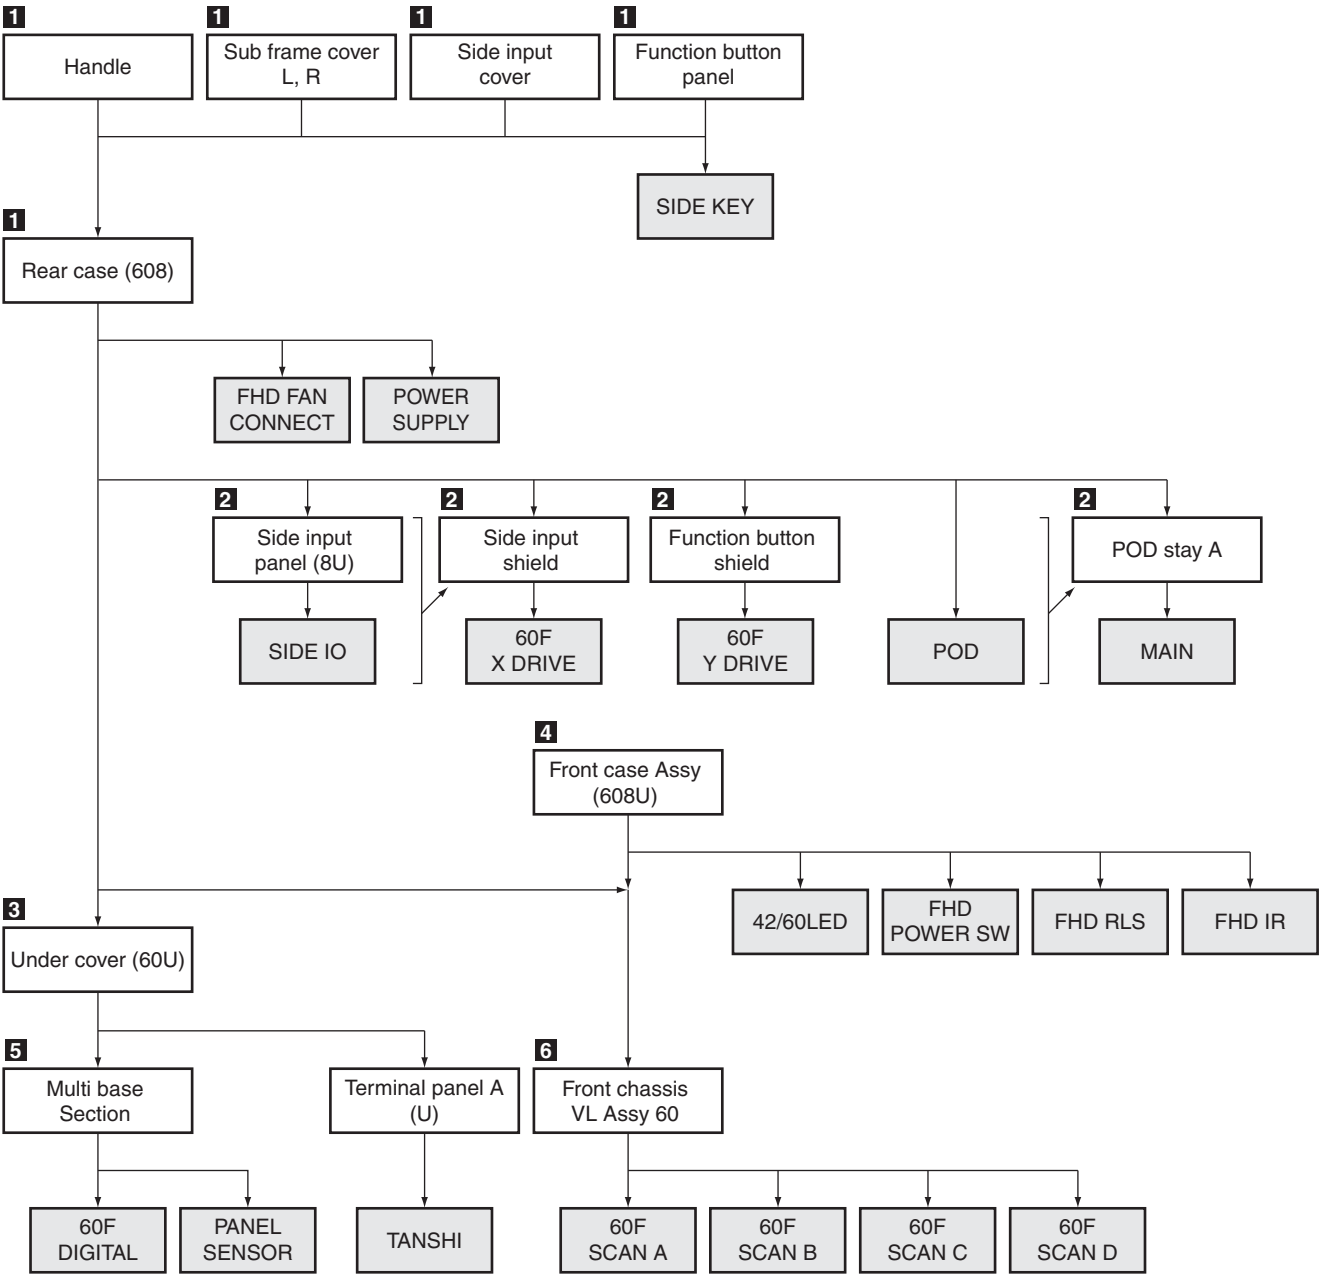

7. DISASSEMBLY

7.1 FLOWCHART OF REMOVAL ORDER FOR THE MAIN PARTS AND BOARDS

Note: Even if the unit shown in the photos and illustrations in this manual may differ from your product, the procedures described here are common.

Flowchart of removal order for the main parts and boards

It is efficient to proceed with removal of the main parts and boards in the order shown in the chart below:

Disassembly

Speaker System

- ① Disconnect the speaker cables.
- ② Remove the four screws.
- ③ Remove the speaker system.
- ④ Remove the three brackets by removing the six screws.

A

Disassembly

1 Rear Case (608)

● Function button panel

- ① Remove the two screws.
- ② Remove the function button panel.

● Side input cover

- ③ Remove the two screws.
- ④ Remove the side input cover.

● Handle

- ⑤ Remove the four screws.
- ⑥ Remove the two handles.

● Sub frame cover L, R

- ⑦ Remove the six screws.
- ⑧ Remove the sub frame cover L and R.

C

D

E

F

● Rear case (608)

- ① Remove the 18 screws. (APZ30P100FTB)

- ② Remove the 40 screws. (AMZ30P060FTB)

- ③ Remove the 6 screws. (APZ40P100FTB)

- ④ Remove the one screw. (ABA1341)

- ⑤ Remove the rear case (608).

■ Tightening sequence for the screws when assembling

When assembling the Rear case (608), tighten the screws in the following sequence:

- ① Check that the two bosses for positioning are inserted.
- ② Tighten the one screw.
- ③ Tighten the one screw.
- ④ Tighten the one screw.
- ⑤ Tighten the six screws.
- ⑥ Secure the remaining screws, center ones first then the peripheral screws, to avoid an upward shift of the central part of the rear case.

2 Access to PCB Assys

● SIDE IO Assy

- ① Remove the four screws.
- ② Remove the two screws.
- ③ Remove the four screws.
- ④ Remove the side input panel (8U).

• For 60F X DRIVE Assy

• For SIDE IO Assy

● 60F X DRIVE Assy

- ① Remove the two screws.
- ② Remove the side input shield with PCB.
- ③ Diagnose the 60F X DRIVE Assy.

• For 60F Y DRIVE Assy

Function button shield SIDE KEY Assy

● 60F Y DRIVE Assy

- ① Remove the two screws.
- ② Remove the function button shield with PCB.
- ③ Diagnose the 60F Y DRIVE Assy.

Note:

When removing the POWER SUPPLY Unit, be sure to remove not only the POWER SUPPLY Unit but entire PCB base.

PCB base POWER SUPPLY Unit

FHD FAN
CONNECT Assy

● MAIN Assy

- ① Disconnect cables, connectors, as required.
- ② Remove the two screws.
- ③ Remove the two screws.
- ④ Remove the POD cover.
- ⑤ Remove the POD stay A with PCB.

60F Y DRIVE Assy

60F X DRIVE Assy

■ How to remove the bridge connector connecting between the MAIN and TANSHI Assys

- (1) Grip the two short edges of the connector with longnose pliers.
- (2) Insert a finger between the longnose pliers and the board to protect the board and the mounted parts on the board from accidental damage by the pliers then, using your finger as a fulcrum and the pliers as a lever, pry the connector upward to remove it.

TANSHI Assy

MAIN Assy

POD cover

TANSHI Assy

MAIN Assy

3 Under Cover (60U)

- ① Remove the four screws.
- ② Remove the two screws.
- ③ Remove the four screws.
- ④ Remove the 21 screws.
- ⑤ Remove the under cover (60U).

Note:

The wiring shown in the photo is different from the actual wiring, because the product in the photo is a prototype.
Upon servicing, be sure to restore the original wiring of the unit after repair work.

Under cover (60U)

TANSHI Assy

Terminal panel A (U)

■ Tightening sequence for the screws when assembling

When assembling the under cover (60U), tighten the screws in the following sequence:

- ① Check that the two bosses for positioning are inserted.
- ② Tighten the two screws.
- ③ Tighten other screws.

4 Front Case Assy (608U)

- ① Pull the lower part of the Front case Assy (608U) toward you and out.
- ② Remove the Front case Assy (608U), by pulling it upward.

Front case Assy (608U)

■ Removal of only the Front Case Assy

If only the front case Assy must be removed, follow the procedure below:

- ① Remove the 22 screws.

Rear case (608)

Under cover (60U)

5 Access to 60F DIGITAL Assy

- ① Disconnect the cable.
- ② Remove the two screws.
- ③ Remove the four screws.

Diagnosis

- ④ Disconnect cables, connectors, as required.
- ⑤ Lift the Multi base section to the direction of the arrow.
- ⑥ Fix the multi base section to the product with two reuse wire saddles.

Reuse wire saddle

Exchange

- ④ Disconnect cables, connectors, as required.
- ⑤ Lift the Multi base section to the direction of the arrow.

Multi base section

60F DIGITAL Assy

PANEL SENSOR Assy

6 Exchange of SCAN IC

- ① Release the jumper wire.
- ② Remove the two screws.
- ③ Remove the side key section.

- ④ Remove the four screws.
- ⑤ Remove the two screws.
- ⑥ Remove the front chassis VL Assy 60.

Exchange

Notes for Three pieces connector 40P*

Three pieces connector 40P is a precision part. Pay attention to the handling.

Connecting Method

Disconnecting Method

In addition, please do not touch the electrode plane.

7.3 DISASSEMBLY AND REASSEMBLY PRECAUTIONS FOR SPEAKER SYSTEM

SERVICE PRECAUTIONS

Be careful in handling this product, because scratches on cabinet coating are easily noticeable.
When working on this unit, be sure to place the cabinet on a piece of soft cloth for protection.

(1) Grille Assy

The Grille Assy is secured to the baffle plate with two-sided tape and bosses. When removing the Grille Assy, it is necessary to wear cotton gloves.

● Disassembly

1. Insert the tip of your gloved finger into the gap between the Grille Assy in front and the corner of the baffle plate so that the Grille Assy is slightly lifted.

2. Insert the gloved finger to the extent of the second joint into the gap between the cabinet and the Grille Assy.

3. Alternately and gradually lift the left and right sides of the Grille Assy by about 5 cm, sliding gloved fingers along the cabinet. When lifting the Grille Assy, be sure to lift the left and right sides alternately, but not both sides simultaneously.

Note: Be careful not to bend the Grille Assy too far. Otherwise, it may be damaged.

OK: Good example **NG:** Bad example

OK

NG

● Reassembly

Remove the old two-sided tape attached to the rear side of the Grille Assy and the front side of the baffle, and adhere new two-sided tape. Press the bosses into the baffle plate and press the entire grill into position.
(Press the bosses from the woofer frame.)

(2) Woofer (Disassembly)

The woofer is secured to the baffle plate with four screws from the inside. To remove the woofer, first remove the baffle plate.

● Reassembly

When reassembling the woofer, place it so that its ⊕ terminal is suitable for the inside. Tighten the screws to the baffle.

(3) Tweeter (Disassembly)

The tweeter is secured to the baffle plate with two screws from the inside. To remove the tweeter, first remove the baffle plate.

● Reassembly

When reassembling the tweeter, ⊕ terminal is in the topside.

Network Assy (Caution)

When removing the Network Assy, pull it out a little at a time from alternate sides, because it is seated tightly.

Baffle Assy (Caution)

When reassembling the cabinet and the baffle plate, secure the screws in the order shown in the figure below:

8. EACH SETTING AND ADJUSTMENT

1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

8.1 ADJUSTMENT REQUIRED WHEN THE UNIT IS REPAIRED OR REPLACED

■ When any of the following assemblies is replaced

POWER SUPPLY Unit	➡	Refer to “8.3 HOW TO CLEAR HISTORY DATA” and “8.6 PRECAUTION ON REPLACEMENT OF THE POWER SUPPLY UNIT”.
DIGITAL Assy	➡	Writing of backup data is required. Refer to the “8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)”.
X DRIVE Assy	➡	No adjustment required
Y DRIVE Assy	➡	No adjustment required
Service Panel Assy	➡	Refer to “8.3 HOW TO CLEAR HISTORY DATA” and “8.4 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED”.
MAIN Assy (*)	➡	No adjustment required
PANEL SENSOR Assy	➡	Writing of backup data is required. Refer to the “8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)”.
Other assemblies	➡	No adjustment required

Note: Checking the Cable Card ID

The PDP has a slot for a cable card that is used for managing your information by the cable TV company. The following procedure allows you to check your Cable Card ID and the Host ID.

1. Press HOME MENU.
2. Select “Tuner Setup”. (↑/↓ then ENTER)
3. Select “Channel Setup”. (←/→ then ENTER)
4. Select “POD ID”. (↑/↓)
 - The Host ID and Cable Card ID appear.
5. Press HOME MENU to exit the menu.

(*) : When replacing the MAIN Assy, be sure to perform the FINAL SETUP.

A

Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part. If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

Reason: The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

PCB Assy No.	Assy Name	Parts that Require Whole-Assy Replacement		
		Ref No.	Function Name	Part No.
AWV2457	MAIN Assy	IC4601	AV switch	R2S11006FT
		IC4701	RGB switch	R2S11001FT

POWER SUPPLY Unit

The assembly must be replaced as a unit, and no part replacement is allowed.

MAIN Assy

No adjustment is required after replacement of parts other than those mentioned above.

DIGITAL Assy

No adjustment is required after replacement of parts other than those mentioned above.

X DRIVE Assy

No adjustment is required after replacement of parts other than those shown in "8.5 ADJUSTMENTS WHEN THE DRIVE ASSYS ARE REPLACED."

Y DRIVE Assy

No adjustment is required after replacement of parts other than those shown in "8.5 ADJUSTMENTS WHEN THE DRIVE ASSYS ARE REPLACED."

ADDRESS Assy

No adjustment required

PANEL SENSOR Assy

No adjustment is required after replacement of parts other than those mentioned above.

TANSHI Assy

No adjustment required

8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)

■ Outline

Adjustment data are stored in the EEPROM (4K) on the DIGITAL Assy in the production process. Those adjustment data are also automatically stored in the EEPROM (for backup) on the PANEL SENSOR Assy.
If the DIGITAL Assy is replaced, those adjustment data for backup can be copied from the EEPROM on the PANEL SENSOR Assy to a new DIGITAL Assy.

■ Backed up data

- Drive voltage adjustment value
- Hour-meter count
- Pulse-meter count
- Panel white balance adjustment value
- Serial No.
- Drive waveform adjustment value
- P-ON counter value
- PD/SD histories

■ How to copy backup data

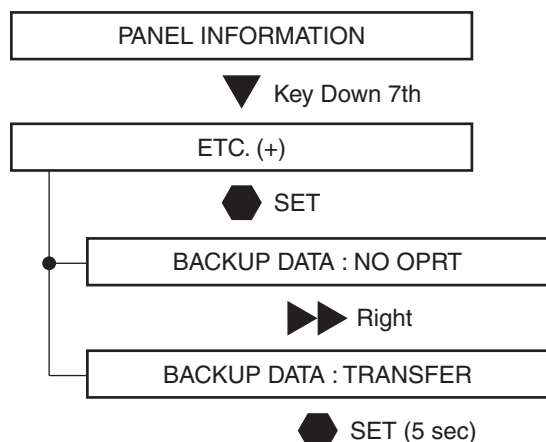

1. When the DIGITAL Assy is replaced with one for service (usual service)

Adjustment data can be restored by copying the data backed up in the PANEL SENSOR Assy to the EEPROM on a new DIGITAL Assy.

The EEPROM on the new DIGITAL Assy has no adjustment data, and the EEPROM for backup in the PANEL SENSOR Assy has adjustment data. After replacing the DIGITAL Assy, enter PANEL FACT. mode, display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP" and "ADJUSTED" is set for "BACKUP". Then, proceed in the following steps:

(1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.
- After the DIGITAL Assy is replaced with one for service, be sure to check if "NO DATA!" is set for "DIG. EEP" on the PANEL INFORMATION page of the PANEL FACT. mode.
- If copying of the backup data fails in the above procedure, the red LED lights, and the blue LED flashes, as a warning that no backup data were copied.
- If both the DIGITAL and PANEL SENSOR Assys are to be replaced, first replace the PANEL SENSOR Assy, turn the unit on and back off again, then replace the DIGITAL Assy.

(2) Copying, using the RS-232C commands

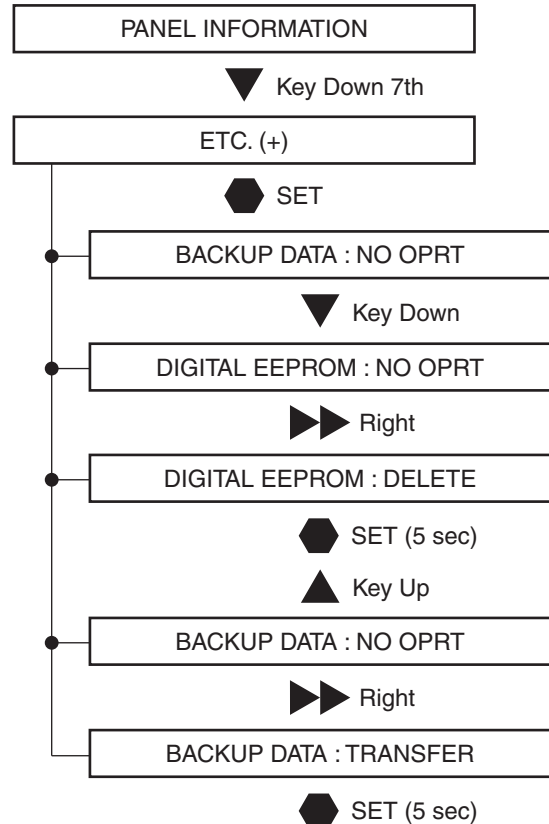

- ① Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ② Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ③ Turn the power off.

2. When a secondhand DIGITAL Assy that had been mounted in another product is to be reused

As adjustment data for another product are already stored in the secondhand DIGITAL Assy, first delete those data then copy the backup data stored in the EEPROM on the PANEL SENSOR Assy.

(1) Copying, using the Factory menu

- ① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.
- ② Turn on the power, using the remote control unit, then enter Panel Factory mode.
Copy the backup data, as shown in the figure below.

- ③ Turn the power off.

Note:

If the secondhand DIGITAL Assy is mounted in the product then the unit is turned on then back off again, the data in the EEPROM on the DIGITAL Assy are copied over the EEPROM in the PANEL SENSOR Assy. Thus the backup data can never be restored. During the first power-on after the DIGITAL Assy is replaced, be sure to enter Factory mode to copy the backup data. Or, before removing the secondhand DIGITAL Assy from the original product, delete the adjustment data on it, using the Factory mode (DIGITAL EEPROM: DELETE), mount it to the product to be repaired, then copy the data from the backup EEPROM.

(2) Copying, using the RS-232C commands

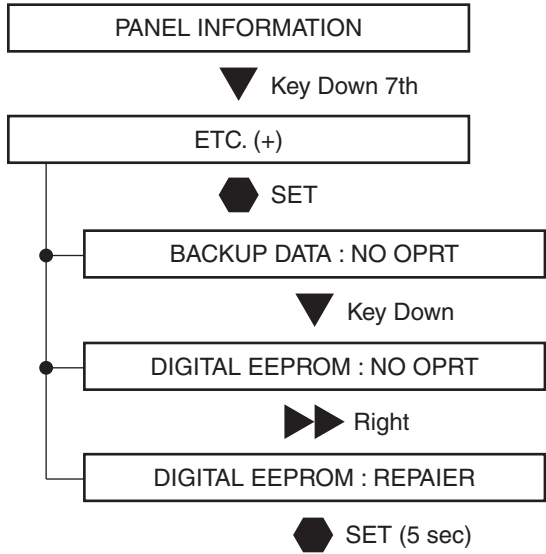

- ① Turn on the unit, using the remote control unit or by issuing the PON command. Then issue the FAY command.
- ② Issue the UAJ command to delete data stored in the EEPROM on the DIGITAL Assy.
- ③ Issue the BCP command to transfer the data stored in the EEPROM for backup.
- ④ Turn the power off.

3. In a case where normal backup data are not stored in the backup EEPROM because the EEPROM on the DIGITAL Assy is defective, etc., and where manually adjusted values are to be applied to the product

Note: In this section, it is assumed that settings for various items have been completed, using Factory menu or RS-232C commands.

(1) Method using the Factory menu

- ① Set various setting/adjustment values.
- ② Proceed in the following steps.

- ③ Turn the power off.

Note:

When a DIGITAL Assy with an EEPROM in which adjustment data are stored is mounted, this step is not required after manual adjustment. ("DIGITAL EEPROM: REPAIR" is not indicated.)

(2) Method using the RS-232C commands

Issue the FAJ command.

8.3 HOW TO CLEAR HISTORY DATA

■ Clearance of various logs after the Assys are replaced

Besides adjustment data, data on accumulated power-on time and logs on defective parts of the product are backed up. Some of those data must be cleared after the Assys are replaced for service.

(1) Clearance of logs, using the RS-232C commands

Item	Content	When the Panel is replaced	When the POWER SUPPLY Unit is replaced	When the Other parts is replaced	RS-232C Commands
Hour-meter	Accumulated power-on time	Must be cleared	No need to be cleared	No need to be cleared	CHM
Pulse-meter	Accumulated number of pulses emitted	Must be cleared (mandatory)	No need to be cleared	No need to be cleared	CPM
Shutdown history	Cause of an SD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CSD
Power-down history	Cause of an PD and hour-meter count	Must be cleared	No need to be cleared	No need to be cleared	CPD
Power-on counter	Relay-on count	No need to be cleared	Must be cleared (mandatory)	No need to be cleared	CPC
MAX TEMP	Historical max. temperature	Must be cleared	Must be cleared	Must be cleared	CMT

Notes:

- As the pulse-meter count is used for each correction function, it must be cleared when an Assy relevant to correction functions is replaced.
- When clearing logs, using the RS-232C commands, first enter Factory mode (by issuing FAY or PFY), then issue the corresponding command.

(2) Clearance of logs, using the Factory menu

① Plug in the AC cord, press the Power switch on the unit to set it to ON, then enter Standby mode.

② Turn on the power, using the remote control unit, then enter Panel Factory mode.

Delete various logs, as shown in the figure below.

③ Turn the power off.

8.4 ADJUSTMENT WHEN THE SERVICE PANEL ASSY IS REPLACED

After the panel is replaced with one for service, voltage margin adjustment is required.

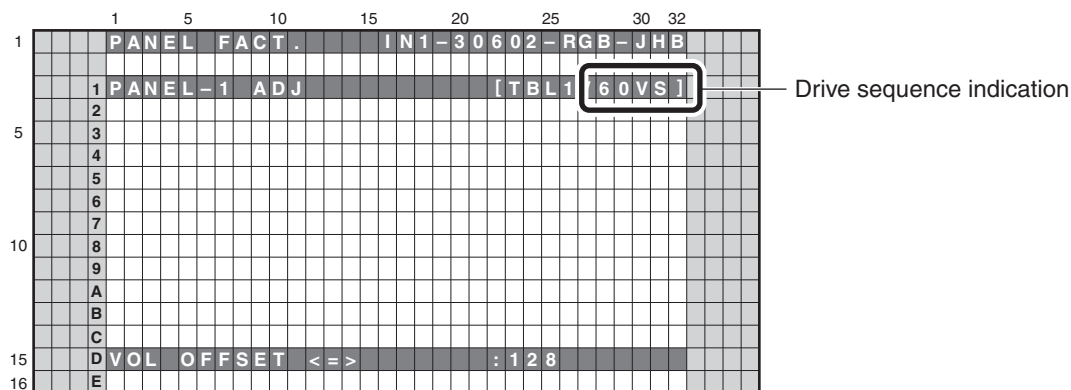

[Preparation]

Basically, voltage margin adjustment is performed using the Panel Factory menu.

After the panel is replaced and the unit is turned on, clear the pulse meter first.

For details on how to clear the pulse meter, see "8.3 HOW TO CLEAR HISTORY DATA".

- *1: As various corrections are made referring to the pulse-meter count to calculate how long the panel has been used, if adjustment of the panel for service is performed without clearing the pulse-meter count, proper adjustments will not be performed.
- *2: The drive sequence for 60-Hz video is used for adjustment. When adjustment is made using the Panel Factory menu, the current drive sequence is displayed on the screen, as shown in the figure below. Make sure that 60VS is always indicated during adjustment.

Example of the On-Screen display during Panel Factory mode

[Supplement]

In the "PANEL-1ADJ" layer, the Panel White Balance value is reset to default, Panel Gamma is set to Straight, Noise is set to OFF, LUT mode is set to ON and Reset active control is set to OFF.

In this case, "---/****" (**** represents the current drive sequence) is displayed on the third line of the On-Screen display during Panel Factory mode.

If adjustment is performed using RS-232C commands, the following commands must be transmitted for preparation:

- [PAV S00] : To set panel drive mode to Factory
- [VFQ S03] : To set Drive Sequence to Video 60-Hz
- [WBI S01] : To temporarily reset the Panel WB adjustment value to default (WBI S00 cancels this setting.)
- [PGR S00] : To set the gamma R value to that for Factory mode
- [PGG S00] : To set the gamma G value to that for Factory mode
- [PGB S00] : To set the gamma B value to that for Factory mode
- [DIZ S03] : Dither ON, L dither ON, noise OFF.
- [\$1800000001] : LUT mode ON
- [\$1000003F00] : Reset active control OFF.

*: If the unit is shut down during the above adjustment flow, resend the above commands from the beginning.

Note on voltage calculation

When calculating the setting voltage, round off to get rid of the fractional part.

Range of margin measuring

Read the voltage within the hysteresis (stricter value).

Definition of limits for the voltage margins (abnormal lit/dead cells)

Abnormal lit cells:

- Five or fewer abnormal cells on the whole screen
- Two or fewer abnormal cells within a radius of 1 cm

Abnormal dead cells

- Fifteen or fewer abnormal cells on the whole screen
- Two or fewer abnormal cells within a radius of 1 cm

*: Abnormal cells visually recognizable at a distance of 1 meter from the panel must be counted.

*: Cells displayed abnormally for less than one second are not counted as abnormal cells.

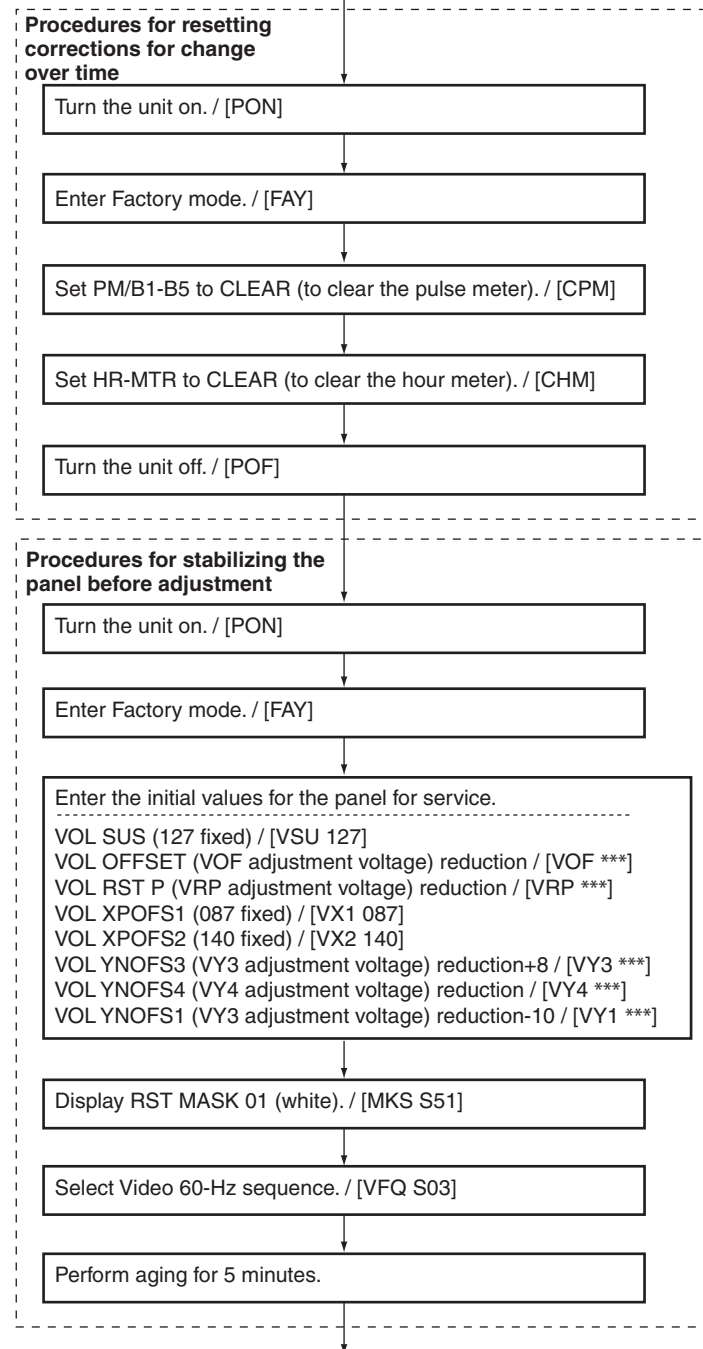

Definition of tones for the measuring signals

FHD signal (1920*1080)/Video 60-Hz sequence
/Dither: ON, L dither: ON, noise: OFF

White	RST MASK 01 (R 1023 /G 1023 /B 1023)

8.5 ADJUSTMENT WHEN THE DRIVE ASSYS ARE REPLACED

■ **Waveform adjustments required when replacing the following parts of the X DRIVE and Y DRIVE Assys.**

Assy Name	Ref No.	Part Name	Part Category	Remarks
X DRIVE Assy	IC1101	PS9117AP	Photo Coupler	
	IC1104	TND307TD	FET Driver	
	IC1204	PS9117AP	Photo Coupler	
	IC1209	TND307TD	FET Driver	
Y DRIVE Assy	IC2101	PS9117AP	Photo Coupler	
	IC2103	TND307TD	FET Driver	
	IC2104	TND307TD	FET Driver	
	IC2201	PS9117AP	Photo Coupler	
	IC2203	TND307TD	FET Driver	

■ TIME LAG ADJUSTMENT OF THE CONTROL SIGNAL (SUS-B)

- ① Measure the time lag for the SUS-U signal to the SUS-B signal.
 - ② Check the time lag for the SUS-B Gate signal to the SUS-U Gate signal.
- Adjust the variable control so that the time lag of Gate becomes "time lag of input signal + $\alpha \pm 5$ nsec."

Note: For details on measuring points of waveform, see the figure below.

Time lag of SUS-U Gate and SUS-B Gate : $\Delta T_{sus-gub}$

Adjust so that " $\Delta T_{sus-gub} = \Delta T_{sus-iub} + \alpha \pm 5$ nsec," using the variable controls shown in the table below:

Assy	VR	Value of α
X DRIVE Assy	VR1002	70 nsec
Y DRIVE Assy	VR2002	60 nsec

■ DELAY ADJUSTMENT OF THE CONTROL SIGNAL (SUS-D)

- ① Measure the pulse width of the SUS-D signal.
- ② Check the pulse width of the SUS-D input signal (gate terminal of Q2111).
Adjust the variable control so that the pulse width of the SUS-D input signal (gate terminal of Q2111) becomes the same pulse width ± 5 nsec as the SUS-D signal.

Note: • Be sure to set the Drive to OFF for adjustment.
• For details on measuring points of waveform, see the figure below.

SUS-D pulse width: $T_{sus - Dg}$

Adjust so that " $T_{sus - Dg} = T_{sus - D} \pm 5$ nsec," using the variable control shown in the table below:

Assy	VR
Y DRIVE Assy	VR2001

A

SUS-B ADJUSTMENT

X DRIVE Assy

B

C

Y DRIVE Assy

D

E

SUS-D ADJUSTMENT

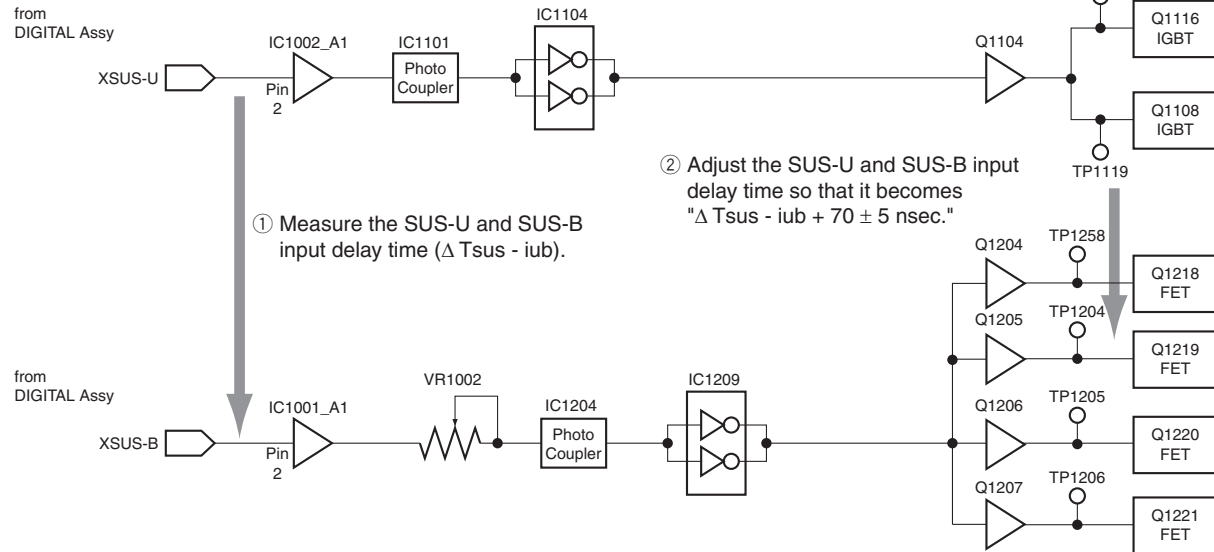

Y DRIVE Assy

F

① Measure the SUS-D pulse width ($T_{sus} - D$).

② Adjust the pulse width ($T_{sus} - D_g$) of the SUS-D input signal so that it becomes " $T_{sus} - D \pm 5 \text{ nsec.}$ "

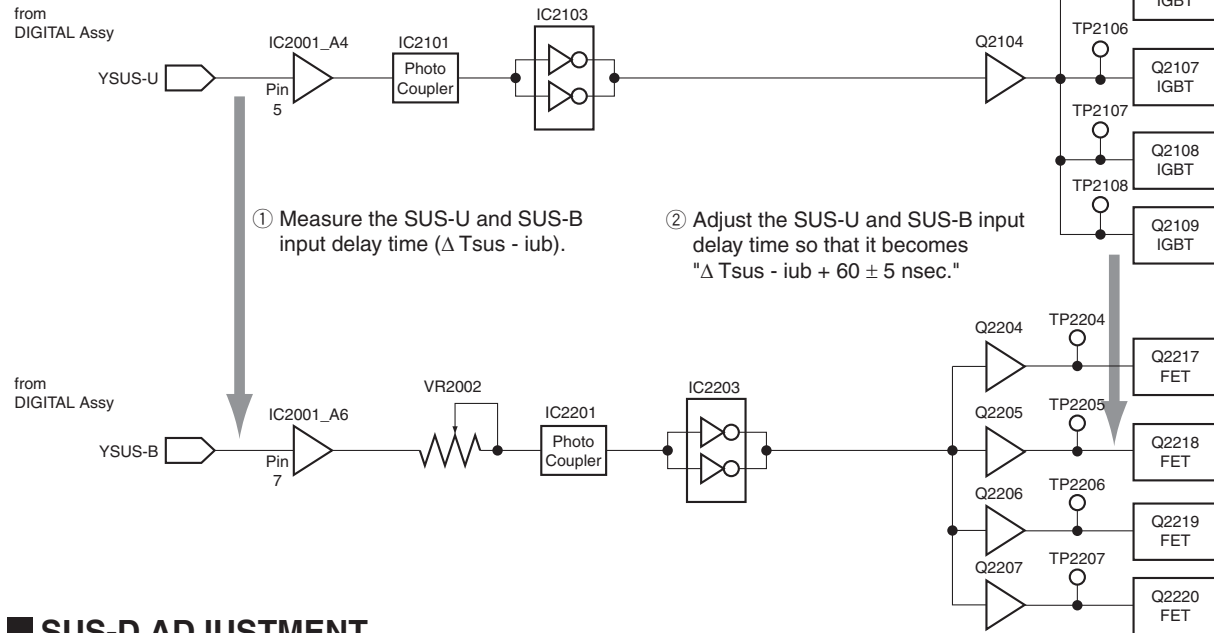

① Measure the SUS-U and SUS-B input delay time ($\Delta T_{sus} - i_{ub}$).

② Adjust the SUS-U and SUS-B input delay time so that it becomes " $\Delta T_{sus} - i_{ub} + 70 \pm 5 \text{ nsec.}$ "

① Measure the SUS-U and SUS-B input delay time ($\Delta T_{sus} - i_{ub}$).

② Adjust the SUS-U and SUS-B input delay time so that it becomes " $\Delta T_{sus} - i_{ub} + 60 \pm 5 \text{ nsec.}$ "

8.6 PRECAUTION ON REPLACEMENT OF THE POWER SUPPLY UNIT

■ Attachment of the housing wire

The housing wire (J126) is attached to the P11 terminal of the POWER SUPPLY unit. As the housing wire is not provided with the POWER SUPPLY unit for service, when replacing the POWER SUPPLY unit, remove the housing wire (J126) from the old one and attach it to the new one.

NEVER turn on the unit before replacement, as doing so may damage the PC boards or the product.

Note:

The wiring shown in the photo is different from the actual power supply unit, because the product in the photo is a prototype.

POWER SUPPLY unit

① Disconnect the housing wire (J126) from the P11 terminal on the old POWER SUPPLY Unit.

② Connect the housing wire (J126) to the P11 terminal on the new POWER SUPPLY Unit.

POWER SUPPLY unit (old)

POWER SUPPLY unit (new)

9. RS-232C

9.1 OUTLINE OF RS-232C COMMAND

9.1.1 PREPARED TOOLS

A

- It is necessary to prepare the following one to use 232C command.
- PC
 - Application for control
 - 232C cable (straight)
- * The setting of the Com port cannot be communicated if it doesn't do correctly.
(Please follow a set explanation of PC in the Com port)

B

9.1.2 USING RS-232C COMMANDS

■

Individual ports are provided for RS-232C and SR+ connectors with this model. Therefore, unlike the case of previous models, which required switching of exclusive operation between these connectors on the Integrator menu, switching is no longer required.

C

■

D

■

E

■

F

9.2 LIST OF RS-232C COMMANDS

RS-232C commands can be used in Service Factory mode. Before using RS-232C commands, it is necessary to change the factory presetting. See "9.1 OUTLINE OF RS-232C COMMAND".

[Note ; If you want to see version information (ex. QS1, QSE, Factory, Menu), Please see 10 seconds after starting.]

■ RS-232C command list

9.3 DETAILS OF EACH COMMANDS

9.3.1 QS1 (PANEL STATUS)

Model information and version information are returned.

Command Format	Effective Operation Modes	Function	Remarks
[QS1]	Every Time	Output of status	Return data: 3 (ECO) + 84 (DATA) + 2 (CS) = 89 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS1 (Fixed)
1	Resolution/Size	1 byte	F
2	Panel Generation	1 byte	8
3	Destination	1 byte	*
4	Grade	1 byte	*
5	Panel Product Form	1 byte	B
6	Boot version of Module microcomputer	3 byte	05F
7	Program version of Module microcomputer	8 byte	-02F
8	Boot version of SQ_LSI	3 byte	04F
9	Program version of SQ_LSI	8 byte	-01Y
10	Panel information	8 byte	G8_50F
11	Reserved (panel section)	8 byte	*****
14	, (comma)	1 byte	,
15	MTB generation	1 byte	8
16	MTB destination	1 byte	A
17	MTB grade	1 byte	H
18	MTB product form	1 byte	B
19	Program version of IF microcomputer	8 byte	010AE
20	Boot version of IF microcomputer	4 byte	01A
21	Program version of Main microcomputer	8 byte	-01A
22	Boot version of Main microcomputer	4 byte	01A
23	Program version of ASIC	8 byte	-01A
24	Boot version of ASIC	4 byte	01A
25	CS (Check Sum)	2 byte	FF

15: MTB Generation	
6	G6
7	G7
8	G8
9	G9
0	G10

16: MTB Destination	
A	North America
C	China
E	Europe
G	General
J	Japan
U	Australia

R	RegularA

18: MTB Product Form	
S	System model
B	One body model

1: Resolution/Size	
3	1024*768/42
4	1024*768/43
5	1280*768/50
6	1365*768/50
7	1365*768/60
E	1920*1080/42
F	1920*1080/50
G	1920*1080/60

3: Destination	
*	Commonness
A	US (Reserved)
E	EU (Reserved)
J	Japan (Reserved)

4: Grade	
*	Commonness
Z	Evaluation

2: Panel Generation	
6	G6
7	G7
8	G8
9	G9
0	G10

5: Panel Product Form	
S	System model
B	All-in-one design TV
M	Monitor
D	Standard module
E	Simple module

10: Panel Information		
1 to 3rd byte	G8_	Generation information G8 + _(under bar) fixed
4 to 5th byte	42	42 inch
	50	50 inch
	60	60 inch
	*	PSIZE information and SQ_LSI version mismatching (version mismatching at SD)
6th byte	F	FHD model
	X	XGA model
	*	Model information and SQ_LSI version mismatching (version mismatching at SD)
7th byte	_	Under bar
8th byte	6	2nd PLANT (XGA 50 inch only)
	4	1st PLANT (XGA 50 inch only)
	*	PLANT information and SQ_LSI version mismatching (version mismatching at SD)
	'	Others

9.3.2 QS2 (PANEL OPERATION DATA)

The command QS2 is for acquiring data on the panel's operational information.

Command Format	Effective Operation Modes	Function	Remarks
[QS2]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO) + 34 (DATA) + 2 (CS) = 39 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS2 (fixed)
1	Power supply status	1 byte	0
2	Adjustment flag of the main unit	1 byte	0
3	Adjustment-data backup flag	1 byte	0
4	"1st PD" data	1 byte	0
5	"2nd PD" data	1 byte	0
6	Reserved	3 byte	**
7	Temperature data (TEMP 1)	3 byte	063
8	SD main data	1 byte	0
9	SD sub data	1 byte	0
10	Operation status induced by SD	1 byte	0
11	Reserved	3 byte	0
12	HOUR METER	8 byte	00000437
13	MASK indication	1 byte	0
14	Still picture detection	1 byte	7C
15	SCAN protection detection	1 byte	
16	Panel crack detection	1 byte	
17	Address emergency detection	1 byte	
18	Reserved	4 byte	
19	CS	2 byte	

1: Power supply status

P	During power ON
0	Entering Passive mode failed during standby
1	Entering Passive mode succeeded during standby

2: Adjustment flag of the main unit

0	Adjustment completed
1	Adjustment not completed

3: Adjustment-data backup flag

0	With backup data
1	No backup data

4, 5: PD data

0	No PD data
1	Not used
2	POWER
3	SCAN
4	SCN-5V
5	Y-DRV
6	Y-DCDC
7	Y-SUS
8	ADRS
9	X-DRV
A	X-DCDC
B	X-SUS
C	DIG-DCDC
D	Not used
E	Not used
F	UNKNOWN

8: SD main data

0	No SD
1	SQ_LSI communication error
2	MDU-IIC communication error
3	Abnormally in RST2
4	TEMP

9-1: SD-Sub (SQ_LSI)

0	No SD-Sub data
1	Communication error
2	Drive stop
3	BUSY
4	Version mismatching (H/S)
5	Version mismatching (M/S)

9-2: SD-Sub (MDU-IIC)

0	No SD-Sub data
1	EEPROM
2	BACKUP
3	DAC1
4	DAC2

9-3: SD-Sub (TEMP)

0	No SD-Sub data
1	TEMP1 high temperature
2	TEMP1 low temperature

10: Operation status induced by SD

0	Normal
1	Relay-off completed
2	During warning indication

13: MASK indication

0	MASK-OFF
1	MASK-ON

14 to 17: Detection of Each Protection function

0	Normal operation
1	At detection of protection operation

1 2 3 4

9.3.3 QS3 (OTHER DATA ON THE PANEL)

A The command QS3 is for acquiring data on operational information of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QS3]	All operations	To acquire data on operations of the panel	Return data: 3 (ECO) + 58 (DATA) + 2 (CS) = 63 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS3
1	SERIAL	15 byte	-----
2	HOURLY METER	8 byte	00000000
3	BACKUP HR METER	8 byte	00000000
4	PON COUNTER	8 byte	00000000
5	TEMP1 acquisition (Temperature value)	5 byte	+25.0 (*1)
6	TEMP0 acquisition (Temperature value)	5 byte	+25.0 (*1)
7	MaxTEMP acquisition (Temperature value)	5 byte	+75.0 (*1)
8	Reserved	4 byte	****
9	CS	2 byte	FB

Note
(*1) : Centigrade scale

9.3.4 QAJ (PANEL ADJUSTMENT DATA)

The command QAJ is for acquiring the panel's factory-preset data.

Command Format	Effective Operation Modes	Function	Remarks
[QAJ]	All operations	To acquire data on the setting value of drive voltage	Return data: 3 (ECO) + 84 (DATA) + 2 (CS) = 89 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QAJ
1	V-SUS adjustment value	3 byte	128
2	Vysnfs adjustment value	3 byte	128
3	Vyprst adjustment value	3 byte	128
4	Vxpofs1 adjustment value	3 byte	128
5	Vxpofs2 adjustment value	3 byte	128
6	Vyknofs1,2 adjustment value	3 byte	128
7	Vyknofs3 adjustment value	3 byte	128
8	Vyknofs4 adjustment value	3 byte	128
9	R1K adjustment value	3 byte	128
10	R2K adjustment value	3 byte	128
11	Y1K adjustment value	3 byte	128
12	Y1Z adjustment value	3 byte	128
13	X1B adjustment value	3 byte	128
14	Y2B adjustment value	3 byte	128
15	X3B adjustment value	3 byte	128
16	YSB adjustment value	3 byte	128
17	XSB adjustment value	3 byte	128
18	YTK adjustment value	3 byte	128
19	YTZ adjustment value	3 byte	128
20	Y2K adjustment value	3 byte	128
21	Y2Z adjustment value	3 byte	128
22	YNK adjustment value	3 byte	128
23	YNZ adjustment value	3 byte	128
24	R-REVISE setting value	1 byte	0
25	G-REVISE setting value	1 byte	0
26	B-REVISE setting value	1 byte	0
27	ADDRESS 1, 2 setting value	2 byte	01
28	ADDRESS 3, 4 setting value	2 byte	13
29	ADDRESS 5, 6 setting value	2 byte	32
30	ADDRESS 7, 8 setting value	2 byte	30
31	Streaking correction	1 byte	1
32	AM radio countermeasure	1 byte	1
33	Reserved	2 byte	**
34	CS	2 byte	B7

31: Streaking correction	
0	OFF
n	n: 1 to 8 (Mode n)

32: AM radio countermeasure	
n	n: 1 to 8 (SUS frequency n)

9.3.5 QPW (VIDEO ADJUSTMENT DATA OF THE PANEL)

The command QPW is for acquiring the factory-preset data about the video of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPW]	All operations	To acquire data on the video setting value	Return data: 3 (ECO) + 40 (DATA) + 2 (CS) = 45 Byte

Data Arrangement	Data Length	Output Example	1: Drive sequence	3: Type of ABL/WB tables
ECO	3 byte	QPW (fixed)	48V Video 48 Hz	n n: 1 to 4
1 Drive sequence	3 byte	60V	50V Video 50 Hz	11, 12, 13: RGB Gamma setting
2 Standard/nonstandard	1 byte	S	60V Video 60 Hz	n 00 to 31
3 Type of ABL/WB tables	2 byte	T1	72V Video 72 Hz	15: Center luminance correction
4 ABL adjustment value	3 byte	128	75V Video 75 Hz	0 OFF
5 R-HIGH adjustment value	3 byte	256	60P PC 60 Hz	1 ON
6 G-HIGH adjustment value	3 byte	256	70P PC 70 Hz	2 ON (interlocked with APL)
7 B-HIGH adjustment value	3 byte	256	2: Standard/nonstandard	17: WB interlocked with APL
8 R-LOW adjustment value	3 byte	512	S Standard	0 OFF
9 G-LOW adjustment value	3 byte	512	N Nonstandard	1 ON
10 B-LOW adjustment value	3 byte	512	14: Streking correction	2 WB interlocked ON/ γ OFF
11 R gamma setting	2 byte	07	0 OFF	3 WB interlocked OFF/ γ ON
12 G gamma setting	2 byte	07	1 ON	18: Transition of brightness by protective operations
13 B gamma setting	2 byte	07		0 Upper limit state for brightness
14 Streking correction	1 byte	0		1 Brightness being reduced
15 Center luminance correction	1 byte	1		2 Lower limit state for brightness
16 Reserved	1 byte	*		3 Brightness being increased
17 WB interlocked with APL	1 byte	0		
18 Transition of protective operations	1 byte	0		
19 Reserved	2 byte	**		
20 CS	2 byte	39		

9.3.6 QPM (PULSE METER VALUE)

The command QPM is for acquiring the accumulated number of pulses of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPM]	All operations	To acquire data on the accumulated number of pulses	Return data: 3 (ECO) + 40 (DATA) + 2 (CS) = 45 Byte

Data Arrangement	Data Length	Output Example
ECO	3 byte	QPM (fixed)
1 Pulse meter B 1	8 byte	00000000
2 Pulse meter B 2	8 byte	00000000
3 Pulse meter B 3	8 byte	00000000
4 Pulse meter B 4	8 byte	00000000
5 Pulse meter B 5	8 byte	00000000
6 CS	2 byte	6E

9.3.7 QPD (PD LOGS)

The command QPD is for acquiring data from the 8 latest power-down (PD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QPD]	All operations	To acquire data on the power-down logs	Return data: 3 (ECO) + 80 (DATA) + 2 (CS) = 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPD (fixed)
1	Latest "1st PD" data	1 byte	A
2	Latest "2nd PD" data	1 byte	2
3	Data from the hour meter for the latest PD	8 byte	00010020
4	Second latest "1st PD" data	1 byte	E
5	Second latest "2nd PD" data	1 byte	9
6	Data from the hour meter for the second latest PD	8 byte	00008523
7	Third latest "1st PD" data	1 byte	4
8	Third latest "2nd PD" data	1 byte	3
9	Data from the hour meter for the third latest PD	8 byte	00004335
10	Fourth latest "1st PD" data	1 byte	2
11	Fourth latest "2nd PD" data	1 byte	0
12	Data from the hour meter for the fourth latest PD	8 byte	00000945
13	Fifth latest "1st PD" data	1 byte	4
14	Fifth latest "2nd PD" data	1 byte	0
15	Data from the hour meter for the fifth latest PD	8 byte	00000715
16	Sixth latest "1st PD" data	1 byte	A
17	Sixth latest "2nd PD" data	1 byte	2
18	Data from the hour meter for the sixth latest PD	8 byte	00000552
19	Seventh latest "1st PD" data	1 byte	A
20	Seventh latest "2nd PD" data	1 byte	0
21	Data from the hour meter for the seventh latest PD	8 byte	00000213
22	Eighth latest "1st PD" data	1 byte	D
23	Eighth latest "2nd PD" data	1 byte	0
24	Data from the hour meter for the eighth latest PD	8 byte	00000123
25	CS	2 byte	27

1, 2, 4, 5: PD data	
0	No PD
1	Not used
2	P-POWER
3	SCAN
4	SCN-5V
5	Y-DRIVE
6	Y-DCDC
7	Y-SUS
8	Address
9	X-DRIVE
A	X-DCDC
B	X-SUS
C	DIGITAL-DC/DC
D	Not used
E	Not used
F	UNKNOWN

A The command QSD is for acquiring the data from the 8 latest shutdown (SD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QSD]	All operations	To acquire data on the shutdown logs	Return data: 3 (ECO) + 80 (DATA) + 2 (CS) = 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QSD (fixed)
1	Latest SD data	1 byte	1
2	Latest SD subcategory data	1 byte	0
3	Data from the hour meter for the latest SD	8 byte	00752013
4	Second latest SD data	1 byte	5
5	Second latest SD subcategory data	1 byte	0
6	Data from the hour meter for the second latest SD	8 byte	00456378

13		HMG/HG Model Version	10 byte	1.0.126
14		User Password	4 byte	1234
15	–	Check Sum	2 byte	13

9.3.10 QMT (TEMPERATURE / FAN ROTATION / ROOM LIGHT SENSOR)

Temperature information / FAN rotation state / Room light sensor information on the MTB side is returned.

Command Format	Effective Operation Modes	Function	Remarks
[QMT]	Every time	Output of status	A/D value of MTB-side's temperature/FAN rotating status

Order	Part	Data Arrangement	Data Length	Output Example
0	–	Received Command name	3 byte	QMT
1	MTB	A/D value of MTB-side Temperature	3 byte	267
2		MTB-side FAN rotating speed (0: STOP, 1: LOW, 2: HIGH)	1 byte	1
3		A/D value of room light sensor	3 byte	009
4		Level of room light sensor (Value: 1 to 5)	1 byte	5

9.3.11 QNG (SHUTDOWN INFORMATION OF MTB)

MTB side's shutdown information is acquired.

Command Format	Effective Operation Modes	Function	Remarks
[QNG]	Every time	Output of status	

Order	Part	Data Arrangement	Data Length	Output Example
0	—	Received Command name	3 byte	QNG
1	MTB	1st latest NG No.	1 byte	0
2		Subcategory No. for the 1st latest NG.	1 byte	0
3		MTB hour meter for the 1st latest NG.	7 byte	0000000

9.3.12 QSI (INPUT SIGNAL DATA)

The command QSI is for acquiring all data on input video signals.

Command Format	Effective Operation Modes	Function	Remarks
[QSI]	All operations	To acquire all data on input video signals	Return data: 3 (ECO) + 66 (DATA) + 2 (CS) = 71 Byte

Data Arrangement		Data Length	Output Example
ECO		3 Byte	QSI (fixed)
1	Type of drive sequence	3 Byte	60V
2	Standard/nonstandard	1 Byte	S
3	Type of ABL/WB tables	2 Byte	T1
4	Total value of PCN	4 Byte	0256
5	Total value of PRH	4 Byte	0256
6	Total value of PGH	4 Byte	0256
7	Total value of PBH	4 Byte	0256
8	Total value of PBR	4 Byte	0512
9	Total value of PRL	4 Byte	0512
10	Total value of PGL	4 Byte	0512
11	Total value of PBL	4 Byte	0512
12	Total value of ABL	3 Byte	128
13	V frequency distinction	4 Byte	6002
14	Reserved	1 Byte	*
15	Reserved	4 Byte	****
16	APL acquiring data	4 Byte	1023
17	Number of SUS pulses	4 Byte	0457
18	Result of detection of still picture	1 Byte	1
19	Result of detection of cracking in the panel	1 Byte	1
20	Result of detection for scanning protection	1 Byte	1
21	Result of detection for external protection	1 Byte	1
22	Transition of protection operation	1 Byte	1
23	Reserved	4 Byte	****
24	CS	2 Byte	27

1: Type of Drive sequence	
50V	Video 50 Hz
60V	Video 60 Hz
72V	Video 72 Hz
75V	Video 75 Hz
60P	PC 60 Hz
70P	PC 70 Hz

2: Standard/nonstandard	
S	Standard
N	Nonstandard

3: Type of ABL/WB tables	
Tn	n: 1 to 4

13: V frequency distinction	
Reading value *100	

16: APL acquiring data	
Output with 10 bit 0 to 1023	

17: Number of SUS pulses	
0174 to 2752	

18 to 21: Each protection function	
0	Setting: OFF
1	Setting: ON (during wait)
2	Setting: ON (during operation)

22: Transition of protection operations	
0	Upper limit state for brightness
1	Brightness being reduced
2	Lower limit state for brightness
3	Brightness being increased

9.3.13 DRV (PANEL DRIVE-POWER ON / OFF)

Drive ON/OFF: ON/OFF control of panel drive-power system

Command Format	Effective Operation Modes	Function	Remarks
[DRV+S00]	Every time	DRIVE OFF	
[DRV+S01]	Every time	DRIVE ON (default)	

Once the DRIVE OFF command is accepted, DRIVE OFF cannot be canceled by pressing the DRIVE OFF key again or by turning the unit off then back on with the STANDBY OFF/ON key.

To cancel DRIVE OFF, restart the unit by unplugging then again plugging in the power cord.

9.3.14 FAY / FAN (ADJ. COMMANDS PERMISSION / PROHIBITION)

The commands FAY/FAN are for prohibiting/permitting panel/MTB-adjustment commands.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAY]	Normal operation mode while the power is on	Adjustment command is valid.	For details, refer to the section "6.1.3 FUNCTIONS WHEN ENTERING THE SERVICE FACTORY MODE".
[FAN]	During FAY	Adjustment command is invalid.	

9.3.15 FAJ / UAJ / CBU / BCP (BACKUP FUNCTION FOR ADJUSTMENT VALUE)

When the DIGITAL Assy is to be replaced, adjustment values can be copied from the backup EEPROM to the EEPROM of the Assy for service.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAJ]	During FAY	To make the flag setting that indicating that adjustment of the panel unit has been completed	This takes at least 350 mS.
[UAJ]		To make the flag setting that indicating that adjustment of the main unit has not been completed	
[CBU]		To make the flag setting that indicating that backup data have not been copied	The backup ROM is initialized.
[BCP]		To copy Digital backup data to EEPROM	

10. EXPLODED VIEWS AND PARTS LIST

NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 ● The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 ● Screws adjacent to ▼ mark on product are used for disassembly.
 ● For the applying amount of lubricants or glue, follow the instructions in this manual.
 (In the case of no amount instructions, apply as you think it appropriate.)
